Evolutionary Computation Agoston E. Eiben,1999-01-01 Practical Applications of Evolutionary Computation to Financial Engineering Hitoshi Iba,Claus C. Aranha,2012-02-15 Practical Applications of Evolutionary Computation to Financial Engineering presents the state of the art techniques in Financial Engineering using recent results in Machine Learning and Evolutionary Computation This book bridges the gap between academics in computer science and traders and

explains the basic ideas of the proposed systems and the financial problems in ways that can be understood by readers without previous knowledge on either of the fields To cement the ideas discussed in the book software packages are offered that implement the systems described within The book is structured so that each chapter can be read independently from the others Chapters 1 and 2 describe evolutionary computation The third chapter is an introduction to financial engineering problems for readers who are unfamiliar with this area The following chapters each deal in turn with a different problem in the financial engineering field describing each problem in detail and focusing on solutions based on evolutionary computation Finally the two appendixes describe software packages that implement the solutions discussed in this book including installation manuals and parameter explanations

Automating the Design of Data Mining Algorithms Gisele L. Pappa, Alex Freitas, 2009-10-27 Data mining is a very active research area with many successful real world applications It consists of a set of concepts and methods used to extract interesting or useful knowledge or patterns from real world datasets providing valuable support for decision making in industry business government and science Although there are already many types of data mining algorithms available in the literature it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem In addition data mining algorithms have been manually designed therefore they incorporate human biases and preferences This book proposes a new approach to the design of data mining algorithms instead of relying on the slow and ad hoc process of manual algorithm design this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach More precisely we propose a genetic programming system a type of evolutionary computation method that evolves computer programs to automate the design of rule induction algorithms a type of classification method that discovers a set of classification rules from data We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions data mining algorithms in our case but in principle other types of search methods for this task could be investigated in the future

Data Mining and Knowledge Discovery with Evolutionary Algorithms Alex A. Freitas, 2002-08-21 This book integrates two areas of computer science namely data mining and evolutionary algorithms Both these areas have become increasingly popular in the last few years and their integration is currently an active research area In general data mining consists of extracting knowledge from data The motivation for applying evolutionary algorithms to data mining is that evolutionary algorithms are robust search methods which perform a global search in the space of candidate solutions This book emphasizes the importance of discovering comprehensible interesting knowledge which is potentially useful for intelligent decision making The text explains both basic concepts and advanced topics

Optimization Of Structural And Mechanical Systems Jasbir S Arora, 2007-09-05 Computational optimization methods have matured over the last few years due to extensive research by applied mathematicians and engineers These methods have been applied to many practical

applications Several general purpose optimization programs and programs for specific engineering applications have become available to solve particular optimization problems Written by leading researchers in the field of optimization this highly readable book covers state of the art computational algorithms as well as applications of optimization to structural and mechanical systems Formulations of the problems and numerical solutions are presented and topics requiring further research are also suggested Evolutionary Computation Zbigniew Michalewicz, Marc Schoenauer, Polska Akademia Nauk. Instytut Badań Systemowych, 1997 Evolutionary Algorithms Alain Petrowski, Sana Ben-Hamida, 2017-04-24 Evolutionary algorithms are bio inspired algorithms based on Darwin's theory of evolution They are expected to provide non optimal but good quality solutions to problems whose resolution is impracticable by exact methods In six chapters this book presents the essential knowledge required to efficiently implement evolutionary algorithms Chapter 1 describes a generic evolutionary algorithm as well as the basic operators that compose it Chapter 2 is devoted to the solving of continuous optimization problems without constraint Three leading approaches are described and compared on a set of test functions Chapter 3 considers continuous optimization problems with constraints Various approaches suitable for evolutionary methods are presented Chapter 4 is related to combinatorial optimization It provides a catalog of variation operators to deal with order based problems Chapter 5 introduces the basic notions required to understand the issue of multi objective optimization and a variety of approaches for its application Finally Chapter 6 describes different approaches of genetic programming able to evolve computer programs in the context of machine learning **Proceedings of the ... Congress on Evolutionary Computation**, 2004 *Proceedings of the Genetic and Evolutionary Computation Conference*, 2002 Genetic Programming, 2002 *Applications and Science of Neural Networks, Fuzzy Systems, and Evolutionary Computation*, 1999 *GECCO-2002* William B. Langdon, 2002 Evolutionary Computation D. Dumitrescu, Beatrice Lazzerini, Lakhmi C. Jain, A. Dumitrescu, 2000-06-22 Rapid advances in evolutionary computation have opened up a world of applications a world rapidly growing and evolving Decision making neural networks pattern recognition complex optimization search tasks scheduling control automated programming and cellular automata applications all rely on evolutionary computation Evolutionary Computation presents the basic principles of evolutionary computing genetic algorithms evolution strategies evolutionary programming genetic programming learning classifier systems population models and applications It includes detailed coverage of binary and real encoding including selection crossover and mutation and discusses the m l and m l evolution strategy principles The focus then shifts to applications decision strategy selection training and design of neural networks several approaches to pattern recognition cellular automata applications of genetic programming and more *Evolutionary Computation 2* Thomas Baeck, D.B Fogel, Z Michalewicz, 2000-11-20 *Evolutionary Computation 2 Advanced Algorithms and Operators* expands upon the basic ideas underlying evolutionary algorithms The focus is on fitness evaluation constraint handling techniques population structures advanced techniques in evolutionary computation and the implementation of

evolutionary algorithms It is intended to be used by individual researchers and students in the expanding field of evolutionary computation **23rd DASC** ,2004
