Dynamic Games in Economics Josef Haunschmied, Vladimir M. Veliov, Stefan Wrzaczek, 2014-07-08 Dynamic game theory serves the purpose of including strategic interaction in decision making and is therefore often applied to economic problems This book presents the state of the art and directions for future research in dynamic game theory related to economics It was initiated by contributors to the 12th Viennese Workshop on Optimal Control Dynamic Games and Nonlinear Dynamics and combines a selection of papers from the workshop with invited papers of high quality *Computational Methods in Economic Dynamics* Herbert Dawid, Willi Semmler, 2011-03-23 This volume is centered around the issue of market design and resulting market dynamics The economic crisis of 2007 2009 has once again highlighted the importance of a proper design of market protocols and institutional details for economic dynamics and macroeconomics Papers in this volume capture institutional details of particular markets behavioral details of agents decision making as well as spillovers between markets and effects to the macroeconomy Computational methods are used to replicate and understand market dynamics emerging from interaction of heterogeneous agents and to develop models that have predictive power for complex market dynamics Finally treatments of overlapping generations models and differential games with heterogeneous actors are provided Modeling, Stochastic Control, Optimization, and Applications George Yin, Qing Zhang, 2019-07-16 This volume collects papers based on invited talks given at the IMA workshop in Modeling Stochastic Control Optimization and Related Applications held at the Institute for Mathematics and Its Applications University of Minnesota during May and June 2018 There were four week long workshops during the conference They are 1 stochastic control computation methods and applications 2 queueing theory and networked systems 3 ecological and biological applications and 4 finance and economics applications For broader impacts researchers from different fields covering both theoretically oriented and application intensive areas were invited to participate in the conference It brought together researchers from multi disciplinary communities in applied mathematics applied probability engineering biology ecology and networked science to review and substantially update most recent progress As an archive this volume presents some of the highlights of the workshops and collect papers covering a broad range of topics **Dynamic Analysis in Complex Economic Environments** Herbert Dawid, Jasmina Arifovic, 2020-12-22 This book analyses decision making in dynamic economic environments By applying a wide range of methodological approaches combining both analytical and computational methods the contributors examine various aspects of optimal firm behaviour and relevant policy areas Topics covered include optimal control dynamic games economic decision making and applications in finance and economics as well as policy implications in areas such as pollution regulation This book is dedicated to Christophe Deissenberg a well known and distinguished scholar of economic dynamics and computational economics It appeals to academics in the areas of optimal control dynamic games and computational economics as well as to decision makers working in policy domains such as environmental policy **Optimal Control**

Theory Suresh P. Sethi, 2022-01-03 This new 4th edition offers an introduction to optimal control theory and its diverse applications in management science and economics. It introduces students to the concept of the maximum principle in continuous as well as discrete time by combining dynamic programming and Kuhn-Tucker theory. While some mathematical background is needed, the emphasis of the book is not on mathematical rigor but on modeling realistic situations encountered in business and economics. It applies optimal control theory to the functional areas of management including finance, production and marketing as well as the economics of growth and of natural resources. In addition, it features material on stochastic Nash and Stackelberg differential games and an adverse selection model in the principal-agent framework. Exercises are included in each chapter while the answers to selected exercises help deepen readers' understanding of the material covered. Also included are appendices of supplementary material on the solution of differential equations, the calculus of variations and its ties to the maximum principle and special topics including the Kalman filter, certainty equivalence, singular control, a global saddle-point theorem, Sethi-Skiba points and distributed parameter systems. Optimal control methods are used to determine optimal ways to control a dynamic system. The theoretical work in this field serves as the foundation for the book in which the author applies it to business management problems developed from his own research and classroom instruction. The new edition has been refined and updated, making it a valuable resource for graduate courses on applied optimal control theory but also for financial and industrial engineers, economists and operational researchers interested in applying dynamic optimization in their fields.

Dynamic Economic Problems with Regime Switches Josef L. Haunschmied, Raimund M. Kovacevic, Willi Semmler, Vladimir M. Veliov, 2020-11-07 This book presents the state of the art in the relatively new field of dynamic economic modelling with regime switches. The contributions written by prominent scholars in the field focus on dynamic decision problems with regime changes in underlying dynamics or objectives. Such changes can be externally driven or internally induced by decisions. Utilising the most advanced mathematical methods in optimal control and dynamic game theory, the authors address a broad range of topics including capital accumulation, innovations, financial decisions, population economics, environmental and resource economics, institutional change and the dynamics of addiction. Given its scope, the book will appeal to all scholars interested in mathematical and quantitative economics.
