Dynamics Of Complex Intracontinental Basins The Central European Basin System:

Dynamics of Complex Intracontinental Basins Ralf Littke,Ulf Bayer,Dirk Gajewski,Susanne Nelskamp,2008-08-11

Sedimentary basins host among others most of our energy and fresh water resources they can be regarded as large geo reactors in which many physical and chemical processes interact Their complexity can only be well understood in well organized interdisciplinary co operations This book documents how researchers from different geo scientific disciplines have jointly analysed the structural thermal and sedimentary evolution as well as fluid dynamics of a complex sedimentary basin system which has experienced a variety of activation and reactivation impulses as well as intense salt tectonics In this book we have summarized our geological geophysical and geochemical understanding of some of the most important processes affecting sedimentary basins in general and our view on the evolution of one of the largest best explored and most complex continental sedimentary basins on Earth The Central European Basin System **The Variscan Orogen of Central Europe**

Ulf Linnemann,2025-08-27 The book is written by international team of specialized geoscientists and represents the current knowledge of the evolution of the Variscan Orogen in Central Europe After a preface the geotectonic position of the mountain belt within the supercontinent Pangea and the zoning of the orogen is described Chapter 1 The birth of the Central European Variscides and the role of the Avalonian and Cadomian orogenic processes as forerunners of the Central European Variscides is presented also in Chapter 1 The big building blocks of the Variscan orogen north and south of the Rheic suture are lined out in detail in the main part of the book Chapters 2 to 18 After the description of the igneous activity in Permo Carboniferous time Chapter 19 neotectonic reactivation Chapter 20 current models for Variscan orogenic processes Chapter 21 and the zircon data base Chapter 22 are briefly characterized A final major section Chapters 23 to 29 includes geobiological palaeontological and palaeoenvironmental data including event stratigraphy relevant for Variscan plate tectonics The book is written for an international readership of professional geoscientists of students of natural sciences and of people interested in the formation and geology of Central Europe Sedimentary Facies Reconstruction and Kinematic

Restoration of Tight Gas Fields Anna Alexandra Vackiner,2013-03-20 The thesis of Anna Alexandra Vackiner focuses on the geometric architecture and tectonic evolution of the Permian series combining seismic interpretation 3D block field studies in an analogue basin Panamint Valley in California as well as 2D restoration of representative cross sections through time in order to illustrate the complex interaction between multiphase extension inversion and salt diapirism It will be of major interest for exploration geologists involved in tectonically complex areas Fran ois Roure August 2012 This thesis improves the understanding and localization of the Upper Rotliegend II tight gas reservoir rock facies It provides insights into the detailed Upper Rotliegend II palaeo topography and local tectonically induced sediment thickness changes prior to a multi phase tectonic overprinting The research presented in this study further focuses on the tectonically induced synsedimentary facies distribution in transtensional continental settings on the basis of a comparison with a modern field analogue which

enables a detailed analysis of the reservoir rock s distribution and its properties The study is rounded off with an analysis of the influence of the multiphase tectonic overprinting on the mature Upper Rotliegend II reservoir rocks *Salt in the Earth Sciences* Webster Mohriak,2025-08-07 A comprehensive review of giant salt basins salt tectonic events and their global implications Salt is formed when water rich in evaporite minerals accumulates on the Earth s surface and then evaporates Over time pressure and tectonics change the structure and shape of salt layers Recent technological advances have improved the interpretation and modeling of subsurface salt structures Salt in the Earth Sciences Basin Analysis and Salt Tectonics presents a global overview of giant salt basins formed under diverse tectonic settings connecting salt deposition with tectonic events climate change and more Volume highlights include Stratigraphic and structural features of giant salt basins Theories for the origin of salt giants and their deep crustal architecture Accumulations of hydrocarbon resources in salt basins Global examples of giant salt basins Salt and shale tectonic models including salt and mud diapirism magmatism and salt dissolution Correlations with plate tectonics climate changes global glaciations and major volcanic events Extreme environments associated with evaporite deposition on Earth and other planets of the solar system Browse the other volume in this set Salt in the Earth Sciences Evaporite Rocks and Salt Deposition The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals **Characterization of an Upper Permian Tight Gas Reservoir** Philipp

Antrett,2013-03-22 The thesis of Philipp Antrett is focused on reservoir properties petrography lithofacies and sedimentology core analysis and nanoporosity studies It will be of major interest for colleagues involved in the exploration and production of tight gas reservoirs in Northern Europe and elsewhere Fran ois Roure August 2012 This thesis describes a multidisciplinary multiscale approach to the analysis of tight gas reservoirs It focused initially on the facies architecture of a Permian tight gas field in the Southern Permian Basin SPB East Frisia northern Germany To improve field development 3D seismic data wireline and core data were compared to a reservoir analogue in the Panamint Valley California United States In addition to the large scale approach a work flow that investigates microporosity by combining Scanning Electron Microscopy Broad Ion Beam SEM BIB and optical microscopy was developed For a better understanding of the depositional environment and reservoir rock distribution in the SPB a sedimentary facies analysis of four cores from the tight gas field in East Frisia was compared to a second study area in northern central Germany This study demonstrates that tight gas exploration and production requires multidisciplinary multiscale approaches beyond standard seismic interpretation work flows to better understand the temporal and spatial evolution of these complex reservoirs [Permo-Triassic Salt Provinces of Europe, North Africa and the Atlantic Margins](#) Juan I. Soto,Joan Flinch,Gabor Tari,2017-06-05 Permo Triassic Salt Provinces of Europe North Africa and the Atlantic Margins Tectonics and Hydrocarbon Potential deals with the evolution and tectonic significance of the Triassic evaporite rocks in the Alpine orogenic system and the Neogene basins in the Iberian Peninsula

North Africa and the western Mediterranean As the nature of the Triassic evaporite sequences the varied diapiric structures they feed and the occurrence of hydrocarbons suggest that the Triassic evaporites represent an efficient system to trap hydrocarbons this book explores the topic with a wide swath also devoting content to a relatively unexplored topic the mobilization and deformation of the Triassic salt in the western and northern Tethys from Iberia and North Africa Pyrenees and Alps Adriatic and Ionian during the subsequent Alpine orogenic processes The book includes chapters updating varied topics like the Permian and Triassic chronostratigraphic scales palaeogeographic reconstructions of the western Tethys since the Late Permian the petroleum systems associated with Permo Triassic salt allochthonous salt tectonics and a latest revision of salt tectonic processes in the Permian Zechstein Basin the Atlantic Margins from Barents Sea Scotia Portugal Morocco and Mauritania the Alpine folded belts in Europe and the various Triassic salt provinces in North Africa The book is the go to guide for salt tectonic researchers and those working in the hydrocarbon exploration industry Presents the first reference book to cover salt tectonics of Permo Triassic period rocks Features case studies of passive margins like the Barents and the North Sea Greenland Nova Scotia offshore Mauritania Morocco and Iberia and folded belts like the Betics Rif Tell Pyrenees Atlas Mountains Alps Balkans Apennines the Adriatic and Ionian Seas and the Zechstein Basin in Norway the UK the Netherlands Germany and Poland Integrates field observations seismic examples well log data and models developed in universities with highly technical and advanced subsurface studies developed by the petroleum industry
