Architecture Phillip James Tabb, A. Senem Deviren, 2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture

101 Rules of Thumb for Sustainable Buildings and Cities Huw Heywood, 2019-07-25 People across the world are becoming more aware of the need for the buildings and cities they live and work in to be sustainable but the issue of how to

be sustainable can seem a confusing and complex one These rules of thumb provide universal guidelines for the sustainable design of both buildings and the urban realm It s a global primer and textbook for anyone interested in understanding sustainability in the built environment an ideal starting point for students as well as an aide memoir for more experienced readers and practitioners interested in this field

Environmental Sustainability in Sports, Physical Activity and Education, and Outdoor Life Hans Kristian Hognestad,Bieke Gils,Richard Giulianotti,Tommy Langseth,Holly

Thorpe,2022-11-02 *Now Urbanism* Jeffrey Hou,Benjamin Spencer,Thaisa Way,Ken Yocom,2014-10-10 After more than a century of heroic urban visions urban dwellers today live in suburban subdivisions gated communities edge cities apartment towers and slums The contemporary cities we know are more often the embodiment of unexpected outcomes and unintended consequences rather than visionary planning As an alternative approach for rethinking and remaking today s cities and regions this book explores the intersections of critical inquiry and immediate substantive actions The contributions inside recognize the rich complexities of the present city not as barriers or obstacles but as grounds for uncovering opportunity and unleashing potential Now Urbanism asserts that the future city is already here It views city making as grounded in the imperfect messy yet rich reality of the existing city and the everyday purposeful agency of its dwellers Through a framework of situating grounding performing distributing instigating and enduring these contributions written by a multidisciplinary group of practitioners and scholars illustrate specificity context agency and networks of actors and actions in the re making of the contemporary city

Nature-First Cities Cam Brewer,Herb Hammond,Sean Markey,2024-09-03 Nature belongs in cities but how do we put nature first without pushing people aside Nature First Cities reveals the false dichotomy of that question by recognizing that people and nature are indivisible Western urbanization has meant the ongoing expulsion of nature which is engendering biodiversity loss and inequality thwarting economic potential and affecting health This volume instead applies the science and practice of nature directed stewardship to cities Tested through case studies this methodology for urban ecosystem restoration is uniquely effective at revitalizing our strained cities Nature is woven into networks distributed equitably across neighbourhoods and partnered with the urban density that is essential for addressing the climate crisis Nature First Cities offers a practical framework for urban planning that reinforces our place in nature both physically by ensuring that cities are replete with biodiversity and intact ecosystems and conceptually by rebalancing our relationships with the planet and with one another

Green Oslo Dr Mark Luccarelli,Dr Per Gunnar Røe,2013-02-28 As urban regions face the demand to decrease fossil fuel dependency many cities in the developing world are undertaking initiatives designed to create a greener city by aiming for a more sustainable form of urban development and to do so they need to evaluate existing modes of transportation and patterns of land use Focusing on Oslo an early leader in urban environmental policy making and a European green city award winner it argues that this evaluation must adopt and integrate two approaches firstly as a process of ecological modernization based on a combination of transit densification and mixed use

development and secondly as an opportunity to reconsider the character and substance of the built environment as a reflection of natural values landscapes and natural resources of the wider region Environmental debate and concern is widespread in Oslo and this is reflected in its earlier planning decisions to leave intact large forest reserves its successful ecological restoration of the Oslo fjord the importance of outdoor culture among its residents the relatively progressive political agenda of Norway This book provides an opportunity for a critical assessment of the limitations and opportunities inherent in green Oslo and suggests the need for much broader integrative approaches It concludes by highlighting lessons which other cities might learn from Oslo

The Global Foundations of Public Relations Robert E. Brown, Burton St. John III, Jenny Zhengye Hou, 2021-09-27 The Global Foundations of Public Relations Humanism China and the West explores the growing humanistic turn in public relations processes and proposes that this has compelling parallels in the roots of Chinese philosophies As the leader of growth and power across the Pacific Rim public relations in China is not developing in isolation from the West but via mutual accommodations and culturally complex interactions By collecting cases and reflections on PR practices from both Chinese and Western scholars the chapters propose that Chinese philosophies are playing a role in the development of modern Chinese PR practices and focusing less on the obvious differences and contracts seek to highlight their spiritual philosophical and political confluences The conclusions drawn enhance and advance our understanding of public relations globally This innovative work is of interest to educators and researchers in the fields of public relations strategic communications and public diplomacy

The British National Bibliography Arthur James Wells, 2009 [Domus, monthly review of architecture interiors design art](#), 1994 **Creating Built Environments** Roderick Lawrence, 2020-06-14 Built environments are complex emergent systemic and require contextual analysis They should be understood before reconsidering how professionals and researchers of the built environment are educated and trained to reduce the gap between knowledge practice and real world circumstances There is an urgent need to rethink the role of policy makers researchers practitioners and laypeople in the construction renovation and reuse of the built environment in order to deal with numerous environmental ecological economic financial and social ethical challenges of providing a habitat for current and future generations in a world of continual change These challenges are too complex to be dealt with only by one discipline or profession Combinations of different types of knowledge knowing in praxis and tacit knowledge are needed This book presents and illustrates recent innovative contributions with case studies focusing on five strategic domains and the interrelations between them These transdisciplinary contributions apply concepts methods and tools that facilitate convergence and concerted action between participants collaborating in policy definition and project implementation The methods and tools include experiments in living labs prototypes on site and virtual simulations as well as participatory approaches including citizen science the development of alternative scenarios and visioning plausible futures

Sustainable Urban Environments Ellen M. van Bueren, Hein van Bohemen, Laure Itard, Henk Visscher, 2011-09-15 The urban environment buildings cities and infrastructure represents one of the most important contributors to climate change while at the same time holding the key to a more sustainable way of living The transformation from traditional to sustainable systems requires interdisciplinary knowledge of the re design construction operation and maintenance of the built environment Sustainable Urban Environments An Ecosystem Approach presents fundamental knowledge of the built environment Approaching the topic from an ecosystems perspective it shows the reader how to combine diverse practical elements into sustainable solutions for future buildings and cities You ll learn to connect problems and solutions at different spatial scales from urban ecology to material water and energy use from urban transport to livability and health The authors introduce and explore a variety of governance tools that support the transformation process and show how they can help overcome institutional barriers The book concludes with an account of promising perspectives for achieving a sustainable built environment in industrialized countries Offering a unique overview and understanding of the most pressing challenges in the built environment Sustainable Urban Environments helps the reader grasp opportunities for integration of knowledge and technologies in the design construction and management of the built environment Students and practitioners who are eager to look beyond their own fields of interest will appreciate this book because of its depth and breadth of coverage

The Natural City Ingrid Leman Stefanovic, Stephen Bede Scharper, 2011-12-10 Urban and natural environments are often viewed as entirely separate entities human settlements as the domain of architects and planners and natural areas as untouched wilderness This dichotomy continues to drive decision making in subtle ways but with the mounting pressures of global climate change and declining biodiversity it is no longer viable New technologies are promising to provide renewable energy sources and greener designs but real change will require a deeper shift in values attitudes and perceptions A timely and important collection The Natural City explores how to integrate the natural environment into healthy urban centres from philosophical religious socio political and planning perspectives Recognizing the need to better link the humanities with public policy The Natural City offers unique insights for the development of an alternative vision of urban life

Ecological Urban Architecture Thomas Schröpfer, 2012-12-13 The goal of advancing eco cities often remains confined to political or technological issues This book establishes a focus on architectural and infrastructural design approaches to sustainable urban development Taking as a basis the critical assessment of the five prototypical eco cities of Vauban Freiburg solarCity Linz Valdespartera Sarriguren Pamplona und Bo01 Malm the book identifies fields in which architectural and urban designers can use their creative skills and methods to achieve sustainable results on the urban scale The themes of Materialize Mobilize Simulate and Transform highlight the shift

from the manipulation of quantitative variables to interactive relationships effecting qualitative outcomes in design For example Materialize explores the potential of eco design beyond the traditional palette of materials to show how spatial boundaries can be re imagined as gradients of conditioned versus unconditioned space working with climatic conditions rather than material boundaries to help generate new forms of urban architecture *Design and Management of Sustainable Built Environments* Runming Yao,2013-03-27 Climate change is believed to be a great challenge to built environment professionals in design and management An integrated approach in delivering a sustainable built environment is desired by the built environment professional institutions The aim of this book is to provide an advanced understanding of the key subjects required for the design and management of modern built environments to meet carbon emission reduction targets In *Design and Management of Sustainable Built Environments* an international group of experts provide comprehensive and the most up to date knowledge covering sustainable urban and building design management and assessment The best practice case studies of the implementation of sustainable technology and management from the BRE Innovation Park are included *Design and Management of Sustainable Built Environments* will be of interest to urban and building designers environmental engineers and building performance assessors It will be particularly useful as a reference book for undergraduate and postgraduate students in the built environment field *Children Living in Sustainable Built Environments* Pia Christensen,Sophie Hadfield-Hill,John Horton,Peter Kraftl,2017-12-06 Urban living has dramatically changed over the past generation refashioning children s relationships with the towns and cities in which they live and the modes of living within them Focusing on the global shift in urban planning towards sustainable urbanism from master planned sustainable communities to the green retrofitting of existing urban environments *Children Living in Sustainable Built Environments* offers a critical analysis of the challenges tensions and opportunities for children and young people living in these environments Drawing upon original data *Children Living in Sustainable Built Environments* demonstrates how the needs interests and participation of children and young people often remain inferior to the design planning and local politics of new urban communities Considering children from their crucial role as residents engaging and contributing to the vitalities of their community to their role as consumers using and understanding sustainable design features the book critically discusses the prospects of future inclusion of children and young people as a social group in sustainable urbanism Truly interdisciplinary *Children Living in Sustainable Built Environments* forms an original theoretical and empirical contribution to the understanding of the everyday lives of children and young people and will appeal to academics and students in the fields of education childhood studies sociology anthropology human geography and urban studies as well as policy makers architects urban planners and other professionals working on sustainable urban designs *Making Healthy Places* Andrew L. Dannenberg,Howard Frumkin,Richard J. Jackson,2012-09-18 The environment that we construct affects both humans and our natural world in myriad ways There is a pressing need to create healthy places and to reduce the health

threats inherent in places already built However there has been little awareness of the adverse effects of what we have constructed or the positive benefits of well designed built environments This book provides a far reaching follow up to the pathbreaking *Urban Sprawl and Public Health* published in 2004 That book sparked a range of inquiries into the connections between constructed environments particularly cities and suburbs and the health of residents especially humans Since then numerous studies have extended and refined the book's research and reporting *Making Healthy Places* offers a fresh and comprehensive look at this vital subject today There is no other book with the depth breadth vision and accessibility that this book offers In addition to being of particular interest to undergraduate and graduate students in public health and urban planning it will be essential reading for public health officials planners architects landscape architects environmentalists and all those who care about the design of their communities Like a well trained doctor *Making Healthy Places* presents a diagnosis of and offers treatment for problems related to the built environment Drawing on the latest scientific evidence with contributions from experts in a range of fields it imparts a wealth of practical information with an emphasis on demonstrated and promising solutions to commonly occurring problems *Ecological Urbanism* Mohsen Mostafavi, Gareth

Doherty, 2010-04-15 With the aim of projecting alternative and sustainable forms of urbanism the book asks What are the key principles of an ecological urbanism How might they be organized And what role might design and planning play in the process While climate change sustainable architecture and green technologies have become increasingly topical issues surrounding the sustainability of the city are much less developed The premise of the book is that an ecological approach is urgently needed both as a remedial device for the contemporary city and an organizing principle for new cities Ecological urbanism approaches the city without any one set of instruments and with a worldview that is fluid in scale and disciplinary approach Design provides the synthetic key to connect ecology with an urbanism that is not in contradiction with its environment The book brings together design practitioners and theorists economists engineers artists policy makers environmental scientists and public health specialists with the goal of reaching a more robust understanding of ecological urbanism and what it might be in the future Contributors include Homi Bhabha Stefano Boeri Chuck Hoberman Rem Koolhaas Sanford Kwinter Bruno Latour Nina Marie Lister Moshen Mostafavi Matthias Schuler Sissel Tolaas Charles Waldheim *Ecological Urbanism* Susannah Hagan, 2015 *Ecological Urbanism* The Nature of the City asks the questions that are important inside and outside the built environment professions what are climate change urbanisation and ecology doing to the theory and practice of urban design How does Ecological Urbanism figure in this change What is Ecological Urbanism In answer this book is neither definitive impossible when a subject is still in motion nor encyclopaedic equally impossible when so much has been written on almost every aspect of these essays Instead it seeks to rebalance the ecological narrative and its embryonic modes of practice with the narratives of urbanism and its older deeply embedded modes of practice It examines the implications for cities and the designers of cities now we are required to again address their metabolic as well

as social and formal dimensions and it explores the extent to which environmental engineering and natural systems design can and should become drivers for the remaking of cities in the 21st century Above all it argues that sooner rather than later urbanism needs to become environmentally literate and environmental design needs to become culturally literate should become drivers for the remaking of cities in the 21st century Above all it argues that sooner rather than later urbanism needs to become environmentally literate and environmental design needs to become culturally literate
