Ecological Speciation Oxford Series In Ecology And Evolution:

Ecological Speciation Patrik Nosil, 2012-03-15 It then reviews the three components of ecological speciation and discusses the geography and genomic basis of the process *Species and Speciation in the Fossil Record* Warren D. Allmon, Margaret M. Yacobucci, 2016-10-05 Although the species is one of the fundamental units of biological classification there is remarkably little consensus among biologists about what defines a species even within distinct sub disciplines The literature of paleobiology in particular is littered with qualifiers and cautions about applying the term to the fossil record or equating such species with those recognized among living organisms In *Species and Speciation in the Fossil Record* experts in the field examine how they conceive of species of fossil animals and consider the implications these different approaches have for thinking about species in the context of macroevolution After outlining views of the Modern Synthesis of evolutionary disciplines and detailing the development within paleobiology of quantitative methods for documenting and analyzing variation within fossil assemblages contributors explore the challenges of recognizing and defining species from fossil specimens and offer potential solutions Addressing both the tempo and mode of speciation over time they show how with careful interpretation and a clear species concept fossil species may be sufficiently robust for meaningful paleobiological analyses Indeed they demonstrate that the species concept if more refined could unearth a wealth of information about the interplay between species origins and extinctions between local and global climate change and greatly deepen our understanding of the evolution of life *Evolutionary Ecology* Anne E. Magurran, 2005 The Trinidadian guppy represents a uniquely tractable vertebrate system which has raised key questions in evolutionary ecology and supplied many of the answers This work discusses this study and incorporates significant new findings and insights **Oceanography and Marine Biology** R.N. Hughes, D.J. Hughes, I. P. Smith, A.C. Dale, 2015-08-26 The book examines basic areas of marine research subjects of special and topical importance and new areas as they arise This series is consistently among the highest ranking in terms of impact factor in the marine biology category of the citation indices compiled by the Institute of Scientific Information It is an essential reference for research workers and students in all fields of marine science and the series volumes find a place in the libraries of universities marine laboratories research institutes and government departments *Biodiversity of the Gulf of Guinea Oceanic Islands* Luis M. P. Ceriaco, Ricardo F. de Lima, Martim Melo, Rayna C. Bell, 2022-10-17 This open access book presents a comprehensive synthesis of the biodiversity of the oceanic islands of the Gulf of Guinea a biodiversity hotspot off the west coast of Central Africa Written by experts the book compiles data from a plethora of sources archives museums bibliography official reports and previously unpublished data to provide readers with the most updated information about the biological richness of these islands and the conservation issues they face The Gulf of Guinea Oceanic Islands Principe S o Tom and Annob n and surrounding islets present extraordinary levels of endemism across different animal fungi and plant groups This very high endemism likely results from the long geological history of the

islands and their proximity to the diversity rich continent Many researchers students and conservationists from across the globe are interested in documenting biodiversity on the islands understanding the evolutionary origins of this diversity and mitigating the impacts of global change on this unique archipelago This book aims to be a primer for a broad audience seeking baseline biodiversity information and to serve as a roadmap for future research efforts aiming to fill knowledge gaps in understanding and conserving the unparalleled biodiversity of the Gulf of Guinea islands *Encyclopedia of Evolutionary Biology*, 2016-04-14 Encyclopedia of Evolutionary Biology Four Volume Set is the definitive go to reference in the field of evolutionary biology It provides a fully comprehensive review of the field in an easy to search structure Under the collective leadership of fifteen distinguished section editors it is comprised of articles written by leading experts in the field providing a full review of the current status of each topic The articles are up to date and fully illustrated with in text references that allow readers to easily access primary literature While all entries are authoritative and valuable to those with advanced understanding of evolutionary biology they are also intended to be accessible to both advanced undergraduate and graduate students Broad topics include the history of evolutionary biology population genetics quantitative genetics speciation life history evolution evolution of sex and mating systems evolutionary biogeography evolutionary developmental biology molecular and genome evolution coevolution phylogenetic methods microbial evolution diversification of plants and fungi diversification of animals and applied evolution Presents fully comprehensive content allowing easy access to fundamental information and links to primary research Contains concise articles by leading experts in the field that ensures current coverage of each topic Provides ancillary learning tools like tables illustrations and multimedia features to assist with the comprehension process *The American Naturalist*, 2009 *Proceedings*, 2008 *The Evolutionary Biology of Species* Timothy G. Barraclough, 2019 Presents a synthetic overview of the evolutionary biology of species incorporating their nature origins proliferation and consequences **Systematics, Biogeography, and Patterns of Diversification in a Group of Circumtropical Marine Gastropods (Genus: Nerita)** Melissa A. Frey, 2008 *Canadian Journal of Fisheries and Aquatic Sciences*, 2014-05 **Philosophical Transactions**, 2004 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest standards Published on the 29th of each month Transactions B is essential reading for all biologists **Speciation and Barriers to Gene Flow** Benjamin Minault Fitzpatrick, 2004 *Philosophical Transactions of the Royal Society of London*, 2008 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest standards Published on the 29th of each month Transactions B is essential reading for all biologists **D. Elmo Hardy Memorial Volume** N. L. Evenhuis, D. Elmo Hardy, 2004 *Speciation in Birds* Trevor Price, 2008 In *Speciation in Birds* Trevor Price a University of Chicago professor and leading expert in the field has written the most authoritative and modern synthesis on the subject to date In clear and engaging prose and through beautiful illustrations

Price shows us why the field is as exciting and vibrant as ever He evaluates the roles of natural selection and sexual selection He asks how speciation contributes to some of the great patterns in species diversity such as the large number of species in the tropics and the many endemic species on isolated islands Throughout the book Price emphasizes the integration of behavior ecology and genetics *Speciation in Plants and Animals* Richard J. Abbott, Steve Trewick, Trevor W. Robbins, Barry J. Everitt, Michael G. Ritchie, Robert H. Cowie, David J. Nutt, Peter M. Hollingsworth, 2008 *Belgian Journal of Zoology*, 1998
