Exploring the Use of Eye Gaze Controlled Interfaces in Automotive Environments Pradipta Biswas, 2016-08-04

This book provides a concise study of eye gaze tracking as a direct controller of electronic displays and interfaces inside cars and other vehicles. The author explores the prospect of controlling a vehicle's internal system via the driver's eye gaze and for the vehicles to analyse and respond to a driver's change in cognitive load too. New algorithms tackling micro saccadic eye movements and the inaccuracy in eye gaze tracking for controlling on-screen pointers are presented and explored. Multimodal fusion algorithms involving eye gaze and finger tracking systems are presented and validated and important results have been obtained on gaze-controlled interfaces and visual responses whilst encountering oncoming road hazards. A set of user trials to validate the algorithms involving driving simulators are also presented by the author. Exploring the Use of Eye Gaze Controlled Interfaces in Automotive Environments would be of great importance to researchers and designers alike within the fields of automotive design and engineering, human computer interaction (HCI) and intelligent interfaces.
