**Epilepsy in Childhood and Adolescence**, 1995      **Epilepsy in Childhood and Adolescence** Richard Appleton, John Gibbs (MRCP.), 1995      *Epilepsy in Children and Adolescents* Albert P. Aldenkamp, Fritz E. Dreifuss, W. Renier, T.P.B.M. Suurmeijer, 1995-07-10 The primary aim of this book is to provide up to date information for all involved in the care and cure of children and adolescents with epilepsy The first part of the book describes the clinical manifestation of epilepsy in children and adolescents and focuses on diagnosis and classification The second and third parts give an extended overview of the current alternatives for drug treatment and surgical interventions The book gives a comprehensive approach to the prevention of adverse effects of treatment due to attention The impact of epilepsy on daily life function and the treatment of epilepsy as a chronic condition is discussed      *Pediatric Epilepsy Case Studies* Kevin Chapman, Jong M. Rho, 2008-09-18 The amount of information currently available on pediatric epilepsy as with all burgeoning fields can seem overwhelming *Pediatric Epilepsy Case Studies From Infancy and Childhood through Adolescence* reviews the recent flood of new information on the pathophysiology genetics and treatment of the various epilepsy syndromes and distills it into an easy to use guide Edited by respected and well known leaders in the field the book provides brief but thorough descriptions of the different syndromes commonly encountered in clinical practice across the pediatric range Grasping the complexity and nuances associated with various epileptic syndromes can be daunting Therefore the book begins with an introduction to the fundamentals of epilepsy Subsequent sections include succinct case presentations and clinically relevant discussions of the more common epilepsy syndromes affecting each age group The chapter authors describe why they chose each particular case what they learned and how it changed their practice The extensive resource section provides an authoritative guide to relevant findings scattered in the literature Research in the field of epilepsy will continue at a rapid pace with the ultimate hope of curing many intractable epilepsy syndromes Organized chronologically from neonate through adolescence this book is the culmination of a group effort involving leading physicians and researchers whose contributions constitute a concise and practical reference for health professionals in training      **Epileptic Syndromes in Infancy, Childhood and Adolescence - 6th ED** Michelle Bureau, Pierre Genton, Antonio V. Delgado-Escueta, Charlotte Dravet, Renzo Guerrini, Carlo Alberto Tassinari, Pierre Thomas, Peter Wolf, 2019-05-01 This 6th edition reviews some of the most noteworthy developments in the field particularly in epileptic syndromes but also focuses on the genetic aspects of the syndromes and their development Progress brought about by advances in neuroimaging is also discussed in addition to specific etiologies such as parasitic diseases and immune and autoimmune diseases The different backgrounds of the contributors coordinators and authors ensure that the book's longstanding reputation for objectivity and seriousness built over almost 35 years remain well deserved This book written by the current leading specialists is recognized worldwide as the international reference in epilepsy      **Benign Focal Epilepsies in Infancy, Childhood and Adolescence** N. Fejerman, Roberto Horacio

Caraballo,2007 It is well known that the incidence of epilepsies is higher in this age period than in any other time in the life span The frequent occurrence of seizures refractory to antiepileptic drug treatments is of great concern On the opposite side of the spectrum the group of benign epilepsy syndromes presented in this book is clearly more prevalent in childhood than the intractable epilepsies Neurologists and paediatricians should be familiar with these conditions because accurate diagnosis and its consequent good prognosis may save much suffering to the family Special emphasis however is given to the small proportion of children who in spite of presenting a usually benign disease show an atypical evolution which hampers their neuropsychological development It is fundamental to be aware of the possible ill effects of some antiepileptic drugs in these cases Finally advancements in the recognition of new and not so rare epileptic syndromes are presented All the subjects are supported by extensive experience of the authors based in large series of patients
