Man-Machine-Environment System Engineering Shengzhao Long,Balbir S. Dhillon,2023-09-04 Man Machine

Environment System Engineering Proceedings of the 23rd Conference on MMESE are an academic showcase of the best papers selected from more than 500 submissions introducing readers to the top research topics and the latest developmental trends in the theory and application of MMESE. These proceedings are interdisciplinary studies on the concepts and methods of physiology, psychology, system engineering, computer science, environment science, management, education, and other related disciplines. Researchers and professionals who study an interdisciplinary subject crossing above disciplines or researchers on MMESE subject will be mainly benefited from this proceedings. MMESE primarily focuses on the relationship between Man, Machine, and Environment, studying the optimum combination of man-machine-environment systems. In this system, Man refers to working people as the subject in the workplace, e.g., operators, decision makers. Machine is the general name for any object controlled by Man, including tools, machinery, computers, systems, and technologies. Environment describes the specific working conditions under which Man and Machine interact, e.g., temperature, noise, vibration, hazardous gases, etc. The three goals of optimization of the man-machine-environment systems are to ensure safety, efficiency, and economy. The integrated and advanced science research topic Man-Machine-Environment System Engineering (MMESE) was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd, 1993, Xuesen Qian wrote: "You have created a very important modern science and technology in China."
