Epistemic Cultures Karin Knorr Cetina, 1999-05-01 How does science create knowledge Epistemic cultures shaped by affinity necessity and historical coincidence determine how we know what we know In this book Karin Knorr Cetina compares two of the most important and intriguing epistemic cultures of our day those in high energy physics and molecular biology Her work highlights the diversity of these cultures of knowing and in its depiction of their differences in the meaning of the empirical the enactment of object relations and the fashioning of social relations challenges the accepted view of a unified science By many accounts contemporary Western societies are becoming knowledge societies which run on expert processes and expert systems epitomized by science and structured into all areas of social life By looking at epistemic cultures in two sample cases this book addresses pressing questions about how such expert systems and processes work what principles inform their cognitive and procedural orientations and whether their organization structures and operations can be extended to other forms of social order The first ethnographic study to systematically compare two different scientific laboratory cultures this book sharpens our focus on epistemic cultures as the basis of the knowledge society

Science Meets Philosophy Hans Christian Garmann Johnsen, 2023-04-26 The book is an attempt to bring together what are often seen as incommensurable scientific and philosophical positions Its core argument is that a main reason for the divisions about what

constitutes scientific knowledge relates to disagreements on philosophical issues The book explores what these disagreements are about and discusses whether they can be overcome Taking a historical perspective the book traces the divides in science back to three main philosophical traditions realism idealism and scepticism It maps how these have inspired three main current positions in science logical empiricism phenomenology and sociology of scientific knowledge The book is intended for a general audience concerned with today's debates on scientific knowledge and society It will be useful for students and researchers studying philosophy of science sociology of scientific knowledge realism phenomenology positivism logical empiricism analytical philosophy and sustainable scientific knowledge *Scientific Collaboration and Collective Knowledge* Thomas Boyer-Kassem, Conor Mayo-Wilson, Michael Weisberg, 2018 Current scientific research almost always requires collaboration among several if not several hundred specialized researchers When scientists co-author a journal article who deserves credit for discoveries or blame for errors How should scientific institutions promote fruitful collaborations among scientists In this work leading philosophers of science address these critical questions

Reconfiguring Knowledge in Higher Education Peter Maassen, Monika Nerland, Lyn Yates, 2018-02-28 Knowledge is now central to national economic competitiveness and to socio-economic endeavours concerned with inequalities and social exclusion and in this context higher education is recognized as a core sector of national policy and strategy Yet the changing pressures directions and practices in relation to knowledge pose many challenges for higher education itself How can and how should research and study programs within higher education align with wider knowledge dynamics How can higher education prepare students in professional fields for different kinds of knowledge intensive work practices How can short-term economic objectives for higher education be aligned with other kinds of knowledge objectives that have characterized universities and colleges and with the intensified impact of global rankings This book takes as its focus the core interest of higher education in knowledge and takes as its object of inquiry the kinds of reconfiguration of knowledge evident in national policies and governance and in the redevelopment and practices of a range of professional and academic study programs in higher education institutions in Norway and Australia From these detailed accounts the book demonstrates the complexity of knowledge as an object of policy and practice the competing logics that may be evident within and between study programs and policies and the different kinds of agents and drivers that are part of knowledge reconfiguration in higher education and that need further attention going forward The New Natural Resource Professor Hans Christian Garman

Johnsen, 2014-06-28 The New Natural Resource is a book about the role of knowledge in social and economic development There is a need to address the process of developing knowledge as a social process and The New Natural Resource starts with the argument that knowledge is inherently a social phenomenon This allows us to discuss the relation between individual opinions and what is regarded as knowledge It also allows us to see how economic and political and democratic processes are interrelated Acknowledging that we are more dependent on contesting processes of knowledge development in

society implies that we should address how society as a whole is able to legitimize what it regards as the right kind of knowledge

The New Natural Resource Hans Christian Garmann Johnsen, 2016-03-03 Increasingly in the public discourse there are references to the knowledge economy knowledge society knowledge workers and knowledge organisations The argument is that knowledge is becoming the main economic resource replacing the natural resources that drove the industrial revolution The new knowledge economy is driven by knowledge development innovation and highly skilled employees Increasing investment in higher education and in universities is in line with this strategy and understanding In an earlier book *Creating Collaborative Advantage* edited with Richard Ennals Professor Hans Christian Garmann Johnsen argued that it is knowledge that links social and economic processes He believes that what is missing in the current discussion on innovation is a conceptualisation of exactly what knowledge is In *The New Natural Resource* he digs deeper into what it is and how it develops and subsequently leads to widespread change The author argues that knowledge is inherently a social phenomenon That is why social processes are closely linked to economic development and why this relationship becomes even more apparent in the new knowledge economy Knowledge is not an objective entity established once and for all Knowledge development is interrelated with values norms perceptions and interpretations We need to know what the mechanisms are by which knowledge becomes legitimate true and relevant

Knowledge at the Crossroads? Lyn Yates, Peter Woelert, Victoria Millar, Kate O'Connor, 2016-10-26 There is much discussion about what needs to change in education institutions in the 21st century but less attention given to how core disciplinary studies should be considered within that context This book is based on a major 4 year research study of history and physics in the changing environment of schools and universities in Australia Are these forms of knowledge still valuable for students Are they complementary to or at odds with the concerns about 21st century skills interdisciplinary and collaborative research teams employability and learner centred education How do those who work in these fields see changes in their disciplines and in their work environment And what are the similarities and differences between the experiences of teachers and academics in physics and those in history The book draws on interviews with 115 school teachers and university academics to provide new perspectives on two important issues Firstly how for the purposes of today's schools and universities can we adequately understand knowledge and knowledge building over time Secondly what has been productive and what has been counter productive in recent efforts to steer and manage the changes in Australia

Advancing Knowledge and the Knowledge Economy Brian Kahin, Dominique Foray, 2006 International experts discuss the generation and management of knowledge in the face of an explosion of data a revolution in information technology and the increasingly blurred distinction between private and public knowledge

Linnaeus, Natural History and the Circulation of Knowledge Hanna Hodacs, Kenneth Nyberg, Stéphane van Damme, 2018 The name of Carl Linnaeus 1707-1778 is inscribed in almost every flora and fauna published from the mid eighteenth century onwards in this

respect he is virtually immortal In this book a group of specialists argue for the need to re centre Linnaean science and de centre Linnaeus the man by exploring the ideas practices and people connected to his taxonomic innovations Contributors examine the various techniques materials and methods that originated within the Linnaean workshop paper technologies publication strategies and markets for specimens Fresh analyses of the reception of Linnaeus s work in Paris K nigsberg Edinburgh and beyond offer a window on the local contexts of knowledge transfer including new perspectives on the history of anthropology and stadial theory The global implications and negotiated nature of these intellectual social and material developments are further investigated in chapters tracing the experiences and encounters of Linnaean travellers in Africa Latin America and South Asia Through focusing on the circulation of Linnaean knowledge and placing it within the context of eighteenth century globalization authors provide innovative and important contributions to our understanding of the early modern history of science

World Wide Work Sylvia van de Bunt-Kokhuis,2006 The amount of information that is online and potentially relevant to learners is enormous Finding selecting and judging relevant online content are important competencies in a world where lifelong learning is becoming a must In practice online content is the subject of economic cultural and language filtering arising from design features such as browsers commercial search engines portals and intellectual property protected software Local knowledge becomes more vulnerable and less easy to find on the web Filtering of online content may affect the mind map of e learners and diminish the independence of their opinions in school university or the industrial workplace This book highlights the economic cultural and language filtering of online content
