PRE-USE SERVICE

1. Fill gas tank with regular grade clean gasoline.
2. Fill sparkplug with oil. Read model plate on engine or consult Engine Manual for correct grade oil to use.

OPERATING INSTRUCTIONS

UNIT CONTROLS

This mower is equipped with a handle mounted throttle control lever. There are four operating positions shown on the control—STOP, SLOW, FAST and START TO START ENGINE.

CAUTION: Keep hands and feet clear of cutting blade and all moving parts.

1. Move throttle lever to Start. **NOTE:** A warm engine will usually start anywhere between Slow and Fast.

2. To start the engine, position yourself firmly with one foot on the Main Frame and pull up sharply on the recoil starter. Do not allow the starter rope to snap back but reward slowly while keeping hold of the handle.

CAUTION: Never leave the mower unattended while the engine is running. Always stop the engine when not in use.

CUTTING HEIGHT ADJUSTMENT

Stop engine, disconnect spark plug wire from spark plug and place wire where it cannot make contact with the plug.

The cutting height of your mower is adjusted by moving the wheels up or down to obtain the desired cut. Be sure that the front and rear wheels are located in corresponding holes. Figure 4 shows the possible cutting heights.

SERVICE INSTRUCTIONS

BLADE CARE

It is very important to keep your cutting blade well balanced and sharp.

ALWAYS DISCONNECT the spark plug wire before attempting to inspect or do any work on the machine. Wire must be held at least 2 inches from plug.

Sharpen both ends by use of a grinding wheel or new file. Remove excessive metal from heavy and until blade is balanced. Replace blade being absolutely sure all parts are reassembled in the proper order or severe vibration will occur.

If you should accidentally hit a large stone, iron pipe or other foreign object, turn off engine immediately. Then check to see that blade is running true. To do this use some straight flat object such as a block saw blade or a long file. Place it flat on bottom of cutter blade, extended so it will scratch inside of housing when blade is moved slightly. Then bring other end of blade around to same position and make another scratch in same manner. If the two scratches are more than 1/4 inch apart, straighten blade by bending, until it tests true by the above scratch test. If in the above test the flat head on the end of blade shaft appears to wobble, the engine has a bent shaft and should be repaired.

WASH-OUT PORT

This mower is equipped with a Wash-Out Port (See Figure 1). With engine running at fast speed insert and hold garden hose in the Wash-Out Port. For the best results, Wash-Out Port should be used before grass clippings have a chance to dry underneath the mower housing.
