Experimenting On A Small Planet A Scholarly Entertainment:

Experimenting on a Small Planet William W. Hay, 2012-12-14 This book is a thorough introduction to climate science and global change. The author is a geologist who has spent much of his life investigating the climate of Earth from a time when it was warm and dinosaurs roamed the land to today's changing climate. Bill Hay takes you on a journey to understand how the climate system works. He explores how humans are unintentionally conducting a grand uncontrolled experiment which is leading to unanticipated changes. We follow the twisting path of seemingly unrelated discoveries in physics, chemistry, biology, geology, and even mathematics to learn how they led to our present knowledge of how our planet works. He explains why the weather is becoming increasingly chaotic as our planet warms at a rate far faster than at any time in its geologic past. He speculates on possible future outcomes and suggests that nature itself may make some unexpected course corrections. Although the book is written for the layman with little knowledge of science or mathematics, it includes information from many diverse fields to provide even those actively working in the field of climatology with a broader view of this developing drama. *Experimenting on a Small Planet* is a must read for anyone having more than a casual interest in global warming and climate change, one of the most important and challenging issues of our time.

Paleoclimatology Colin P. Summerhayes, 2020-06-10 Life on our planet depends upon having a climate that changes within narrow limits, not too hot for the oceans to boil away nor too cold for the planet to freeze over. Over the past billion years, Earth's average temperature has stayed close to 14-15°C, oscillating between warm greenhouse states and cold icehouse states. We live with variation, but a variation with limits. Paleoclimatology is the science of understanding and explaining those variations, those limits, and the forces that control them. Without that understanding, we will not be able to foresee future change accurately as our population grows. Our impact on the planet is now equal to a geological force, such that many geologists now see us as living in a new geological era, the Anthropocene. Paleoclimatology describes Earth's passage through the greenhouse and icehouse worlds of the past 800 million years, including the glaciations of Snowball Earth in a world that was then free of land plants. It describes the operation of the Earth's thermostat, which keeps the planet fit for life, and its control by interactions between greenhouse gases, land plants, chemical weathering, continental motions, volcanic activity, orbital change, and solar variability. It explains how we arrived at our current understanding of the climate system by reviewing the contributions of scientists since the mid-1700s, showing how their ideas were modified as science progressed. And it includes reflections based on the author's involvement in palaeoclimatic research. The book will transform debate and set the agenda for the next generation of thought about future climate change. It will be an invaluable course reference for undergraduate and postgraduate students in geology, climatology, oceanography, and the history of science. A real tour de force. An outstanding summary, not only of the science and what needs to be done, but also the challenges that are a consequence of psychological and cultural baggage that threatens not only the survival of our own species but the many others we are eliminating as well. Peter Barrett Emeritus

Professor of Geology Antarctic Research Centre Victoria University of Wellington New Zealand What a remarkable and wonderful synthesis it will be a wonderful source of paleoclimate information and insights Christopher R Scotese Professor Department of Earth and Planetary Sciences Northwestern University Evanston IL USA *The Wizard and the Prophet* Charles Mann, 2019-04-16 From the bestselling award winning author of 1491 and 1493 an incisive portrait of the two little known twentieth century scientists Norman Borlaug and William Vogt whose diametrically opposed views shaped our ideas about the environment laying the groundwork for how people in the twenty first century will choose to live in tomorrow's world In forty years Earth's population will reach ten billion Can our world support that What kind of world will it be Those answering these questions generally fall into two deeply divided groups Wizards and Prophets as Charles Mann calls them in this balanced authoritative nonpolemical new book The Prophets he explains follow William Vogt a founding environmentalist who believed that in using more than our planet has to give our prosperity will lead us to ruin Cut back was his mantra Otherwise everyone will lose The Wizards are the heirs of Norman Borlaug whose research in effect wrangled the world in service to our species to produce modern high yield crops that then saved millions from starvation Innovate was Borlaug's cry Only in that way can everyone win Mann delves into these diverging viewpoints to assess the four great challenges humanity faces food water energy climate change grounding each in historical context and weighing the options for the future With our civilization on the line the author's insightful analysis is an essential addition to the urgent conversation about how our children will fare on an increasingly crowded Earth **Earth's Climate Evolution** Colin P.

Summerhayes, 2015-07-13 To understand climate change today we first need to know how Earth's climate changed over the past 450 million years Finding answers depends upon contributions from a wide range of sciences not just the rock record uncovered by geologists In Earth's Climate Evolution Colin Summerhayes analyzes reports and records of past climate change dating back to the late 18th century to uncover key patterns in the climate system The book will transform debate and set the agenda for the next generation of thought about future climate change The book takes a unique approach to the subject providing a description of the greenhouse and icehouse worlds of the past 450 million years since land plants emerged ignoring major earlier glaciations like that of Snowball Earth which occurred around 600 million years ago in a world free of land plants It describes the evolution of thinking in palaeoclimatology and introduces the main players in the field and how their ideas were received and in many cases subsequently modified It records the arguments and discussions about the merits of different ideas along the way It also includes several notes made from the author's own personal involvement in palaeoclimatological and palaeoceanographic studies and from his experience of working alongside several of the major players in these fields in recent years This book will be an invaluable reference for both undergraduate and postgraduate students taking courses in related fields and will also be of interest to historians of science and or geology climatology and oceanography It should also be of interest to the wider scientific and engineering community high school

science students policy makers and environmental NGOs Reviews Outstanding in its presentation of the facts and a good read in the way that it intersperses the climate story with the author s own experiences This book puts the climate story into a compelling geological history Dr James Baker The book is written in very clear and concise prose and takes original enlightening and engaging approach to talking about ideas from the perspective of the scientists who promoted them Professor Christopher R Scotese A thrilling ride through continental drift and its consequences Professor Gerald R North Written in a style and language which can be easily understood by laymen as well as scientists Professor Dr J rn Thiede What makes this book particularly distinctive is how well it builds in the narrative of change in ideas over time Holocene book reviews May 2016 This is a fascinating book and the author s biographical approach gives it great human appeal E Adlard
