Cato, 1995-01-01 *A Practical Guide to Drug Development in Academia* Daria Mochly-Rosen, Kevin Grimes, 2023-11-06 A lot of hard won knowledge is laid out here in a brief but informative way Every topic is well referenced with citations from both the primary literature and relevant resources from the internet Review of first edition from Nature Chemical Biology Written by the founders of the SPARK program at Stanford University this book is a practical guide designed for professors students and clinicians at academic research institutions who are interested in learning more about the drug development process and how to start transforming their basic research discoveries into novel drugs Often many potentially transformative basic science discoveries are not pursued because they are deemed too early to attract industry interest This comprehensive book lays out simple relatively cost effective things that academic researchers can do to advance their findings to the point that they can be tested in the clinic or attract more industry interest Each chapter broadly discusses an important topic in drug development from discovery optimization and preclinical studies through clinical trial design regulatory issues and marketing assessments After the practical overview provided here the reader is encouraged to consult more detailed texts on specific topics of interest The SPARK model has been adopted in over 60 institutions on six continents and the program has been honored with multiple awards including the 2020 Xconomy Award for Ecosystem Development the 2020 Cures Within Reach Award for Patient Impact Research and the 2022 California Life Sciences Pantheon Award for Academia Non Profits Research The new edition updates every chapter with the latest developments since the 2014 publication of the first edition **ePro** Brian Tiplady, 2016-05-13 Patient self reported data has become increasingly important in today s clinical trials Trials in some disease indications rely upon patient recorded diary data as the primary endpoint to demonstrate drug efficacy including for example indications such as insomnia migraine and pain In addition improvements in quality of life measured using patient questionnaires can now be included as claims on drug labelling Traditionally these data have been collected using paper questionnaires and diaries issued to subjects Regulators and the industry have become increasingly aware of the limitations of recording patient reported outcomes data on paper including data quality and integrity issues As a result there is a growing interest in collection of patient reported outcomes data using electronic means ePRO Solutions include handheld PDAs Interactive Voice Response IVR systems and other site based hardware such as touchscreen PCs Recently there has been much open debate with the regulators around the use of ePRO in clinical drug submissions US and European agencies have approved new drugs that have included ePRO data in the submission dossier but there are many questions around the adoption of the technology that concern the community These include How should instruments developed on paper be adapted for electronic use and what degree of validation should be done between paper and electronic forms How can researchers ensure they are complying with regulatory requirements including the PRO guidance published by FDA in 2009

when using ePRO solutions Can fewer patients be exposed in a clinical trial as a result of improved data quality obtained using electronic diaries What type of solution should be used for certain patient populations and protocols and how can ePRO solutions be designed optimally to increase patient acceptability and compliance Bill Byrom and Brian Tiplady s ePro addresses all these issues reviews the new FDA guidance and provides a very contemporary view on this important subject
