Fast Exercise Tips Scott D. Roberts,2014-05-01 practical ways to apply fast exercise in your life Back cover *Fast Exercise* Michael Mosley,Peta Bee,2013 Just as Dr Michael Mosley s *Fast Diet* the original 5 2 alerted the world to a healthy new way to lose weight *Fast Exercise* turns conventional wisdom on its head when it comes to the workout Can you really get the benefits of exercise in just a few minutes a day Michael Mosley and Peta Bee investigate the science behind a radically different approach to exercise one that is incredibly time efficient Research has shown the extraordinary impact that ultra short bursts of HIT high intensity training can have whatever your age or level of fitness In *Fast Exercise* they offer practical advice and a range of workouts that take just a few minutes a day and can be done any time anywhere Back cover Quick and Easy Low Cholesterol Recipes Catherine Saxelby,2002 *Index de Périodiques Canadiens* ,2002 *High Intensity Interval Training (Hiit)* Stephanie Ridd,2016-04-20 What is high intensity interval training otherwise known as HIIT for short and can I really lose more fat following this routine Well to answer the first part of the question above we can simply say that High intensity interval training is a method or approach to workout exercises that consists of different kinds of short and intense form of exercises In fact the methodology includes two routines that can be used which are the cardio workouts and strength exercises Anyway to answer the second part of the question many have said that optimal fat loss should be done at a lower intensity level and at a longer duration But the reality with HIIT is the fact that at a faster rate but short time fats are being expelled from the body system with greater ease Besides it is also a known fact that most people assume that doing aerobics for 40 60 minutes is the proper way to burn fat efficiently But again I beg to object to that as in actual fact when you do aerobics for that long you will be training at a lower intensity level and you will probably loose less fat Yes more so after you are done your metabolism stays elevated for up to an hour after you finish But with high intensity interval training your metabolism will stay elevated for about 24 hours Yes if you like that is 24 hours of fat burning process for a short but high intensity interval training However before we go too far I want to first let you in on some stats and calculations between low and high intensity exercising Low intensity exercising is classified by having 60% to 65% of your maximum heart rate But with high intensity exercise you are working about 75% to 85% of your maximum heart rate Well I will like you to grab your copy of this book today to get all the tips of getting rid of those fats in the fastest way yes when you get this book *High Intensity Interval Training HIIT The Secret Fast and Easy Way to Burn Fats and Maintain A Healthy Cardiovascular System* Today you will be exposed to the modern and effective strategies to get fats out fast and safe too **High Intensity Interval Training : the Secret Fast and Easy Way to Burn Fats and Maintain a Healthy Cardiovascular System** **Today!** Stephanie Ridd,2016-06-25 What is high intensity interval training otherwise known as HIIT for short and can I really lose more fat following this routine Well to answer the first part of the question above we can simply say that High intensity

interval training is a method or approach to workout exercises that consists of different kinds of short and intense form of exercises. In fact, the methodology includes two routines that can be used, which are the cardio workouts and strength exercises. Anyway, to answer the second part of the question, many have said that optimal fat loss should be done at a lower intensity level and at a longer duration. But the reality with HIIT is the fact that at a faster rate but short time, fats are being expelled from the body system with greater ease. Besides, it is also a known fact that most people assume that doing aerobics for 40-60 minutes is the proper way to burn fat efficiently. But again, I beg to object to that, as in actual fact, when you do aerobics for that long, you will be training at a lower intensity level and you will probably lose less fat. Yes, more so, after you are done, your metabolism stays elevated for up to an hour after you finish. But with high intensity interval training, your metabolism will stay elevated for about 24 hours. Yes, if you like that, it is 24 hours of fat burning process for a short but high intensity interval training. However, before we go too far, I want to first let you in on some stats and calculations between low and high intensity exercising. Low intensity exercising is classified by having 60% to 65% of your maximum heart rate. But with high intensity exercise, you are working about 75% to 85% of your maximum heart rate. Well, I will like you to grab your copy of this book today to get all the tips of getting rid of those fats in the fastest way, yes, when you get this book, **High Intensity Interval Training: HIIT The Secret Fast and Easy Way to Burn Fats and Maintain A Healthy Cardiovascular System**. Today, you will be exposed to the modern and effective strategies to get fats out fast and safe too. **Hiit: High Intensity Interval Workouts You Can Do at Home (A Simple Clear Cut Guide to Losing Weight With High Intensity Interval Training Today)** Cody Olmstead, 101-01-01.
