random effects are discussed here Panel data analysis has been extended by taking dynamic panel data models which are most suitable for macroeconomic research The book is invaluable for students and researchers of social sciences business management operations research engineering and applied mathematics

The Practice of Econometric Theory Charles G. Renfro, 2009-06-29 Econometric theory as presented in textbooks and the econometric literature generally is a somewhat disparate collection of findings Its essential nature is to be a set of demonstrated results that increase over time each logically based on a specific set of axioms or assumptions yet at every moment rather than a finished work these inevitably form an incomplete body of knowledge The practice of econometric theory consists of selecting from applying and evaluating this literature so as to test its applicability and range The creation development and use of computer software has led applied economic research into a new age This book describes the history of econometric computation from 1950 to the present day based upon an interactive survey involving the collaboration of the many econometricians who have designed and developed this software It identifies each of the econometric software packages that are made available to and used by economists and econometricians worldwide

Uncertainty Analysis in Econometrics with Applications Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, Komsan Suriya, 2012-12-14 Unlike uncertain dynamical systems in physical sciences where models for prediction are somewhat given to us by physical laws uncertain dynamical systems in economics need statistical models In this context modeling and optimization surface as basic ingredients for fruitful applications This volume concentrates on the current methodology of copulas and maximum entropy optimization This volume contains main research presentations at the Sixth International Conference of the Thailand Econometrics Society held at the Faculty of Economics Chiang Mai University Thailand during January 10 11 2013 It consists of keynote addresses theoretical and applied contributions These contributions to Econometrics are somewhat centered around the theme of Copulas and Maximum Entropy Econometrics The method of copulas is applied to a variety of economic problems where multivariate model building and correlation analysis are needed As for the art of choosing copulas in practical problems the principle of maximum entropy surfaces as a potential way to do so The state of the art of Maximum Entropy Econometrics is presented in the first keynote address while the second keynote address focusses on testing
