**Climate Action to Unlock the Inclusive Growth Story of the 21st Century** Amar Bhattacharya, Maksym Ivanyna, William Oman, Nicholas Stern, 2021-05-26 Climate change is a major threat to the

sustainability and inclusiveness of our societies and to the planet's habitability. A just transition to a low carbon economy is the only viable way forward. This paper reviews the climate change challenge. It stresses the criticality of systems changes: energy, transport, urban, land use, water, in a climate-challenged world, and the importance of infrastructure investment geared toward such systems changes. The key policies to enable the transition are: public spending on and investment frameworks for sustainable infrastructure; pricing carbon; regulations promoting sustainable use of natural resources; scaling up and aligning finance with climate objectives; low carbon industrial and innovation policies; building resilience and adaptation; better measurement of well-being and sustainability; and providing information and education on climate risks. Implemented well, climate action would unlock the inclusive growth story of the 21st century, making our societies more sustainable, inclusive, and prosperous.

**Sustainability in Natural Resources Management and Land Planning** Walter Leal Filho, Ulisses Miranda Azeiteiro, Andréia Faraoni Freitas Setti, 2021-08-06. This book includes contributions from scientists and representatives from government and non-governmental organisations working in the field of land management and use and on management of fires. The book is truly interdisciplinary and has both a research and application-oriented dimension. The list of topics includes sustainability and water management; sustainability and biodiversity conservation; the future sustainability of nature-based industries such as agriculture, mining, tourism, fisheries, and forestry; sustainability, people, and livelihoods; sustainability and landscapes; planning sustainability and land use; planning, handling, and managing forest fires. The papers are innovative and cross-cutting, and many have practice-based experiences. Also, this book prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSDRTC) reiterates the need to promote a sustainable use of land resources today.

Valuing Climate Damages National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Committee on Assessing Approaches to Updating the Social Cost of Carbon, 2017-05-23. The social cost of carbon (SCCO<sub>2</sub>) is an economic metric intended to provide a comprehensive estimate of the net damages that is the monetized value of the net impacts, both negative and positive, from the global climate change that results from a small 1 metric ton increase in carbon dioxide (CO<sub>2</sub>) emissions. Under Executive Orders regarding regulatory impact analysis and as required by a court ruling, the U.S. government has since 2008 used estimates of the SCCO<sub>2</sub> in federal rulemakings to value the costs and benefits associated with changes in CO<sub>2</sub> emissions. In 2010, the Interagency Working Group on the Social Cost of Greenhouse Gases (IWG) developed a methodology for estimating the SCCO<sub>2</sub> across a range of assumptions about future socioeconomic and physical earth systems. Valuing Climate Changes examines potential approaches along with their relative merits and challenges for a comprehensive update to the current methodology. This publication also recommends near and longer term research priorities to ensure that the SCCO<sub>2</sub> estimates reflect the best available science.
