Essays in Humanistic Mathematics Alvin Murray White, 1993 The mathematics presented in this volume goes beyond the facts formulas and algorithms that most students associate with mathematics to a presentation of mathematics as an intellectual discipline with a human perspective and a history that matters Humanistic mathematics challenges dogmatic teaching styles that expect students to parrot the lecturer It demands creativity from both the teacher and student Humanistic mathematics carries with it an awareness of and a sensitivity to those things mathematics shares with the other humanities Humanistic dimensions of mathematics include An appreciation of the role of intuition in understanding and creating concepts that appear in their finished version to be the result of a merely technical process An understanding of the value judgements in the growth of any discipline Logic alone never completely accounts for what is investigated how it is investigated or why it is investigated The movement which began as the personal vision of a few has now become a major part of mathematical culture What was viewed with skepticism is now accepted and expected Humanistic mathematics is a recent rediscovery of an idea that goes back to Plato D Alembert Wilder Bronowski Cassirer It has provided a vocabulary for previously unarticulated concepts and approaches There are no answers to the question what is important in mathematics We can only ask what is important in mathematics to human beings with given abilities and limitations at a given point in their mathematical development MAA Notes ,1983 Mod. Methods of Teaching Mathematics Deepak Dayal, 2009 **Calculus:**

**A Liberal Art** W.M. Priestley, 2012-12-06 reason for delaying its study has to do with the question of mathematical maturity No use is made here of trigonometric logarithmic or exponential functions except in occasional optional material indicating how such functions can be handled A perceptive remark made by George Polya suggests how we can simultaneously learn mathematics and learn about mathematics i.e. about the nature of mathematics and how it is developed If the learning of mathematics reflects to any degree the invention of mathematics it must have a place for guessing for plausible inference The reader will find plenty of opportunity here for guessing The early chapters go at a gentle pace and invite the reader to enter into the spirit of the investigation Exercises asking the reader to make a guess should be taken in this spirit as simply an invitation to speculate about what is the likely truth in a given situation without feeling any pressure to guess correctly Readers will soon realize that a matter about which they are asked to guess will likely be a topic of serious discussion later on Humanistic Mathematics Network Journal ,1997 **The Role of the History of Mathematics in the**

**Teaching/Learning Process** Sixto Romero Sanchez, Ana Serradó Bayés, Peter Appelbaum, Gilles Aldon, 2023-06-15 This volume presents multiple perspectives on the uses of the history of mathematics for teaching and learning including the value of historical topics in challenging mathematics tasks for provoking teachers reflection on the nature of mathematics curriculum development questions that mirror earlier pedagogical choices in the history of mathematics education and the history of technological innovations in the teaching and learning of mathematics An ethnomathematical perspective on the

history of mathematics challenges readers to appreciate the role of mathematics in perpetuating consequences of colonialism Histories of the textbook and its uses offer interesting insights into how technology has changed the fundamental role of curriculum materials and classroom pedagogies History is explored as a source for the training of teachers for good puzzles and problems and for a broad understanding of mathematics education policy Third in a series of sourcebooks from the International Commission for the Study and Improvement of Mathematics Teaching this collection of cutting edge research stories from the field and policy implications is a contemporary and global perspective on current possibilities for the history of mathematics for mathematics education This latest volume integrates discussions regarding history of mathematics history of mathematics education and history of technology for education that have taken place at the Commission s recent annual conferences Guide to Information Sources in Mathematics and Statistics Martha A. Tucker,Nancy D.

Anderson,2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Susan S. Lenker, 1998 This handbook contains a collection of the winning entries in the first INPUT Competition part of the INPUT Innovative Programs Using Technology Project The INPUT Project was designed to improve instruction by recognizing and rewarding college instructors who rethought the mathematical content of their introductory mathematics courses with innovative uses of technology The targeted introductory mathematics courses were developmental mathematics precalculus business mathematics and introductory statistics *Student Assessment in Calculus* Alan H. Schoenfeld, 1997 It doesn't matter whether you teach a reform or traditional course whether you have large or small sections or whether you use lectures or laboratories The bottom line is the same When all is said and done what counts is what our students understand And that's what *Student Assessment in Calculus* is about Back cover **Making the Connection** Marilyn Paula Carlson, Chris Rasmussen, 2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students' mathematical thinking and problem solving abilities and students' understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students' continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students' mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction *Learning to Teach and Teaching to Learn Mathematics* Matt Delong, Dale Winter, 2002 Addressing the need for tools to train college mathematics instructors in both basic teaching skills and innovative methods this work describes training and mentoring activities that have been used in a variety of settings with new instructors including graduate student teaching assistants undergraduate tutors graders and lab assistants as well as faculty The book offers ideas for the structure of an integrated program of professional development support material for a brief pre semester orientation session material for a semester long program of weekly training meetings and procedures and forms for conducting a system of class visits and feedback This work lacks a subject index DeLong is affiliated with Taylor University Winter is affiliated with Harvard University Annotation copyrighted by Book News Inc Portland OR
