Fine Tuning Fine Tuning:

Cosmological Fine-Tuning Arguments Jason Waller, 2019-09-05 If the physical constants initial conditions or laws of nature in our universe had been even slightly different then the evolution of life would have been impossible This observation has led many philosophers and scientists to ask the natural next question why is our universe so fine tuned for life The debates around this question are wide ranging multi disciplinary complicated technical and at times heated This study is a comprehensive investigation of these debates and the many metaphysical and epistemological questions raised by cosmological fine tuning Waller s study reaches two significant and controversial conclusions First he concludes that the criticisms directed at the multiverse hypothesis by theists and at the theistic hypothesis by naturalists are largely unsuccessful Neither of these options can plausibly be excluded Choosing between them seems to turn on primitive and so hard to justify metaphysical intuitions Second in order to break the philosophical deadlock Waller moves the debate from the level of universes to the level of possible worlds Arguing that possible worlds are also fine tuned in an important and interesting sense Waller concludes that the only plausible explanation for the fine tuning of the actual world is to posit the existence of some kind of God like thing
