Finite Mixture and Markov Switching Models Sylvia Frühwirth-Schnatter, 2006-11-24 The past decade has seen powerful new computational tools for modeling which combine a Bayesian approach with recent Monte simulation techniques based on Markov chains This book is the first to offer a systematic presentation of the Bayesian perspective of finite mixture modelling The book is designed to show finite mixture and Markov switching models are formulated what structures they imply on the data their potential uses and how they are estimated Presenting its concepts informally without sacrificing mathematical correctness it will serve a wide readership including statisticians as well as biologists economists engineers financial and market researchers

*Time Series Analysis: Methods and Applications*, 2012-05-18 The field of statistics not only affects all areas of scientific activity but also many other matters such as public policy It is branching rapidly into so many different subjects that a series of handbooks is the only way of comprehensively presenting the various aspects of statistical methodology applications and recent developments The Handbook of Statistics is a series of self contained reference books Each volume is devoted to a particular topic in statistics with Volume 30 dealing with time series The series is addressed to the entire community of statisticians and scientists in various disciplines who use statistical methodology in their work At the same time special emphasis is placed on applications oriented techniques with the applied statistician in mind as the primary audience Comprehensively presents the various aspects of statistical methodology Discusses a wide variety of diverse applications and recent developments Contributors are internationally renowned experts in their respective areas

**Perspectives on Big Data Analysis** S. Ejaz Ahmed, 2014-08-20 This volume contains the proceedings of the International Workshop on Perspectives on High dimensional Data Analysis II held May 30 June 1 2012 at the Centre de Recherches Mathématiques Universit de Montr al Montr al Quebec Canada This book collates applications and methodological developments in high dimensional statistics dealing with interesting and challenging problems concerning the analysis of complex high dimensional data with a focus on model selection and data reduction The chapters contained in this book deal with submodel selection and parameter estimation for an array of interesting models The book also presents some surprising results on high dimensional data analysis especially when signals cannot be effectively separated from the noise it provides a critical assessment of penalty estimation when the model may not be sparse and it suggests alternative estimation strategies Readers can apply the suggested methodologies to a host of applications and also can extend these methodologies in a variety of directions This

Mathematical Reviews ,2007     *Journal of Econometrics* ,2001     **Generalized Extreme Value Distribution with Time-dependence Using the AR and MA Models in State Space Form** Jouchi Nakajima,2009 A new state space approach is proposed to model the time dependence in an extreme value process The generalized extreme value distribution is extended to incorporate the time dependence using a state space representation where the state variables either follow an autoregressive AR process or a moving average MA process with innovations arising from a Gumbel distribution Using a Bayesian approach an efficient algorithm is proposed to implement Markov chain Monte Carlo method where we exploit a very accurate approximation of the Gumbel distribution by a ten component mixture of normal distributions The methodology is illustrated using extreme returns of daily stock data The model is fitted to a monthly series of minimum returns and the empirical results support strong evidence for time dependence among the observed minimum returns Authors abstract
