**Green Fire Retardants for Polymeric Materials** Pingan Song, Yan Zhang, Xin Wen, 2023-12-06 Many of the polymers we use every day are highly flammable Historically a large number of home fires were caused by ignited polymeric materials until legislation was introduced requiring fire retardants to be added to these materials Fire retardants increase the time it takes for materials to ignite providing valuable time to prevent a fire or escape However it has become apparent that many of the traditional treatments used as fire retardants are harmful to human health and highly persistent in the environment With evermore polymeric materials in our homes and lives it is still highly valuable to be able to make fire retardants but consideration must be given to their environmental impact and sustainability Green Fire Retardants for Polymeric Materials looks at both the choice of different materials and treatments for improving the fire retardancy of polymeric materials as well as green approaches to synthesising these fire retardants It is a timely resource both for green chemists interested in real world applications for their work and polymer scientists keen to increase the sustainability of their products and processes

Flame-Retardant Polymeric Materials Menachem Lewin, 2013-11-11 Flammability has been recognized as an increasingly important social and scientific problem Fire statistics in the United States Report of the National Commission on Fire Prevention and Control America Burning 1973 emphasized the vast devastation to life and property 12 000 lives lost annually due to fire and these deaths are usually caused by inhaling smoke or toxic gases 300 000 fire injuries 11 4 billion dollars in fire cost at which 2 7 billion dollars is related to property loss a billion dollars to burn injury treatment and 3 3 billion dollars in productivity loss It is obvious that much human and economic misery can be attributed to fire situations In relation to this polymer flammability has been recognized as an increasingly important social and scientific problem The development of flame retardant polymeric materials is a current example where the initiative for major scientific and technological developments is motivated by sociological pressure and legislation This is part of the important trend toward a safer environment and sets a pattern for future example Flame retardancy deals with our basic everyday life situations
