Educational Data Mining Applications And Trends Studies In Computational Intelligence:

Educational Data Mining Alejandro Peña-Ayala, 2013-11-08 This book is devoted to the Educational Data Mining arena. It highlights works that show relevant proposals, developments and achievements that shape trends and inspire future research. After a rigorous revision process, sixteen manuscripts were accepted and organized into four parts as follows: Profile. The first part embraces three chapters oriented to: 1. describe the nature of educational data mining (EDM); 2. describe how to pre-process raw data to facilitate data mining (DM); 3. explain how EDM supports government policies to enhance education. Student modeling. The second part contains five chapters concerned with: 4. explore the factors having an impact on the student's academic success; 5. detect student's personality and behaviors in an educational game; 6. predict students' performance to adjust content and strategies; 7. identify students who will most benefit from tutor support; 8. hypothesize the student answer correctness based on eye metrics and mouse click Assessment. The third part has four chapters related to: 9. analyze the coherence of student research proposals; 10. automatically generate tests based on competences; 11. recognize students' activities and visualize these activities for being presented to teachers; 12. find the most dependent test items in students' response data Trends. The fourth part encompasses four chapters about how to: 13. mine text for assessing students' productions and supporting teachers; 14. scan student comments by statistical and text mining techniques; 15. sketch a social network analysis (SNA) to discover student behavior profiles and depict models about their collaboration; 16. evaluate the structure of interactions between the students in social networks. This volume will be a source of interest to researchers, practitioners, professors and postgraduate students aimed at updating their knowledge and find targets for future work in the field of educational data mining.

Serious Games Analytics Christian Sebastian Loh, Yanyan Sheng, Dirk Ifenthaler, 2015-06-13 This volume brings together research on how gameplay data in serious games may be turned into valuable analytics or actionable intelligence for performance measurement, assessment and improvement. Chapter authors use empirical research methodologies including existing experimental and emerging conceptual frameworks from various fields such as computer science, software engineering, educational data mining, statistics, information visualization. Serious games is an emerging field where the games are created using sound learning theories and instructional design principles to maximize learning and training success. But how would stakeholders know what play learners have done in the game environment and if the actions performance brings about learning? Could they be playing the game for fun, really learning with evidence of performance improvement or simply gaming the system, i.e. finding loopholes to fake that they are making progress? This volume endeavors to answer these questions.
