    Generalized Convexity and Related Topics Igor V. Konnov,Dinh The Luc,Alexander M. Rubinov,2006-10-16
    Generalized Convexity, Generalized Monotonicity: Recent Results Jean-Pierre Crouzeix,Juan Enrique Martinez Legaz,Michel Volle,1998-08-31 A function is convex if its epigraph is convex This geometrical structure has very strong implications in terms of continuity and differentiability Separation theorems lead to optimality conditions and duality for convex problems A function is quasiconvex if its lower level sets are convex Here again the geo metrical structure of the level sets implies some continuity and differentiability properties for quasiconvex functions Optimality conditions and duality can be derived for optimization problems involving such functions as well Over a period of about fifty years quasiconvex and other generalized convex functions have been considered in a variety of fields including economies man agement science engineering probability and applied sciences in accordance with the need of particular applications During the last twenty five years an increase of research activities in this field has been witnessed More recently generalized monotonicity of maps has been studied It relates to generalized convexity off unctions as monotonicity relates to convexity Generalized monotonicity plays a role in variational inequality problems complementarity problems and more generally in equilibrium prob lems   **Invexity and Optimization** Shashi K. Mishra,Giorgio Giorgi,2008-05-23 Invexity and Optimization presents results on invex function and their properties in smooth and nonsmooth cases pseudolinearity and eta pseudolinearity Results on optimality and duality for a nonlinear scalar programming problem are presented second and higher order duality results are given for a nonlinear scalar programming problem and saddle point results are also presented Invexity in multiobjective programming problems and Kuhn Tucker optimality conditions are given for a multiobjecive programming problem Wolfe and Mond Weir type dual models are given for a multiobjective programming problem and usual duality results are presented in presence of invex functions Continuous time multiobjective problems are also discussed Quadratic and fractional programming problems are given for invex functions Symmetric duality results are also given for scalar and vector cases
    Abstract Convexity and Global Optimization Alexander M. Rubinov,2000-05-31 This book consists of two parts Firstly the main notions of abstract convexity and their applications in the study of some classes of functions and sets are presented Secondly both theoretical and numerical aspects of global optimization based on abstract convexity are examined Most of the book does not require knowledge of advanced mathematics Classical methods of nonconvex mathematical programming being based on a local approximation cannot be used to examine and solve many problems of global optimization and so there is a clear need to develop special global tools for solving these problems Some of these tools are based on abstract convexity that is on the representation of a function of a rather complicated nature as the upper envelope of a set of fairly simple functions Audience The book will be of interest to specialists in global optimization mathematical programming and convex analysis as well as engineers using mathematical tools and optimization techniques and specialists in mathematical

modelling **Convexity from the Geometric Point of View** Vitor Balestro,Horst Martini,Ralph Teixeira,2024-07-14 This text gives a comprehensive introduction to the common core of convex geometry Basic concepts and tools which are present in all branches of that field are presented with a highly didactic approach Mainly directed to graduate and advanced undergraduates the book is self contained in such a way that it can be read by anyone who has standard undergraduate knowledge of analysis and of linear algebra Additionally it can be used as a single reference for a complete introduction to convex geometry and the content coverage is sufficiently broad that the reader may gain a glimpse of the entire breadth of the field and various subfields The book is suitable as a primary text for courses in convex geometry and also in discrete geometry including polytopes It is also appropriate for survey type courses in Banach space theory convex analysis differential geometry and applications of measure theory Solutions to all exercises are available to instructors who adopt the text for coursework Most chapters use the same structure with the first part presenting theory and the next containing a healthy range of exercises Some of the exercises may even be considered as short introductions to ideas which are not covered in the theory portion Each chapter has a notes section offering a rich narrative to accompany the theory illuminating the development of ideas and providing overviews to the literature concerning the covered topics In most cases these notes bring the reader to the research front The text includes many figures that illustrate concepts and some parts of the proofs enabling the reader to have a better understanding of the geometric meaning of the ideas An appendix containing basic and geometric measure theory collects useful information for convex geometers **Vector Optimization and Monotone Operators via Convex Duality** Sorin-Mihai Grad,2014-09-03 This book investigates several duality approaches for vector optimization problems while also comparing them Special attention is paid to duality for linear vector optimization problems for which a vector dual that avoids the shortcomings of the classical ones is proposed Moreover the book addresses different efficiency concepts for vector optimization problems Among the problems that appear when the framework is generalized by considering set valued functions an increasing interest is generated by those involving monotone operators especially now that new methods for approaching them by means of convex analysis have been developed Following this path the book provides several results on different properties of sums of monotone operators **Generalized Convexity and Related Topics** Igor V. Konnov,Dinh The Luc,Alexander M. Rubinov,2006-10-16 The book contains invited papers by well known experts on a wide range of topics economics variational analysis probability etc closely related to convexity and generalized convexity and refereed contributions of specialists from the world on current research on generalized convexity and applications in particular to optimization economics and operations research **Parametric Optimization and Related Topics III** Jürgen Guddat,1993 This volume contains the proceedings of the third conference on Parametric Optimization and Related Topics held in Gustrow from 30 August until 5 September 1991 Parametric optimization as a part of mathematical programming investigates the behaviour of solutions to optimization problems under data pertubations This behaviour like

continuity and differentiability plays a fundamental role for a series of further questions that are of interest from a practical as well as a theoretical point of view Many relations to other disciplines of operations research like stochastic programming modelbuilding numerical methods multiobjective optimization and optimal control originate from this behaviour The presented articles all refereed are topical and original papers reflecting recent results to current directions of research in theory and applications   Optimality Conditions in Vector Optimization Manuel Arana Jiménez,Gabriel Ruiz Garzón,Antonio Rufián Lizana,2010 Vector optimization is continuously needed in several science fields particularly in economy business engineering physics and mathematics The evolution of these fields depends in part on the improvements in vector optimization in mathematical programming The aim of this Ebook is to present the latest developments in vector optimization The contributions have been written by some of the most eminent researchers in this field of mathematical programming The Ebook is considered essential for researchers and students in this field   **Mathematical Reviews** ,2007   **Parametric Optimization and Related Topics** Jürgen Guddat,1987   *Generalized Convexity and Optimization* Alberto Cambini,Laura Martein,2008-10-14 The authors have written a rigorous yet elementary and self contained book to present in a unified framework generalized convex functions The book also includes numerous exercises and two appendices which list the findings consulted   *Encyclopedia of Optimization* Christodoulos A. Floudas,Panos M. Pardalos,2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling   **Stochastic Programming** RUSZCZYNSK,Alexander Shapiro,2003-10-09 Brings together leading in the most important sub fields of stochastic programming to present a rigourous overview of basic models methods and applications of stochastic programming The text is intended for researchers students engineers and economists who encounter in their work optimization problems involving uncertainty   *Revue roumaine de mathématiques pures et appliques* ,2003   □□□□□□ ,1996   Analele Universității București ,2008   *Lecture Notes in Pure and Applied Mathematics* ,1987   *American Book Publishing Record* ,2007   **Books in Print Supplement** ,1994
