Geotechnical Engineering Nagaratnam Sivakugan, Braja M. Das, 2009 Geotechnical Engineering A Practical Problem Solving Approach covers all of the major geotechnical topics in the simplest possible way adopting a hands on approach with a very strong practical bias You will learn the material through worked examples that are representative of realistic field situations whereby geotechnical engineering principles are applied to solve real life problems *Earthquake Engineering for Dams and Reservoirs* Jonathan Hinks, 2023-09-25 Earthquake Engineering for Dams and Reservoirs is an invaluable source for any engineer or designer tasked with building retrofitting or maintaining dams in all seismically active regions to make decisions on the type of dam structure required for new projects and understand the issues that face existing dams and how to mitigate them River dyke failure modeling under transient water conditions Wilmer Ferney Morales Peñuela, 2015-11-26 Knowledge of the performance of river dykes during flooding is necessary when designing governmental assistance plans aimed to reduce both casualties and material damage This is especially relevant when floods have increased in their frequency during the last decades together with the resulting material damage and life costs Most of previous attempts for analyzing dyke breaching during flooding have neglected to consider the soil mechanics component and the influence of infiltration and saturation changes on the failure mechanisms developed in the river dyke This research project aimed to fill that gap in knowledge by analyzing in a comprehensive manner the effect of transient water conditions represented by successive flood cycles on the seepage conditions and subsequent breaching of dykes Therefore three key sub projects were carried out the analysis of the results from an overflow field test the physical modeling of small scaled models under an enhanced gravity field the numerical modeling of the flow response and the resulting stability of both the air and water side slopes The results from the numerical simulations matched accurately with the results obtained with the centrifuge modeling including the prediction of local instabilities during the flood cycles for those dykes that did not include a toe filter **Analyses for Retaining walls, Slope Stability and Landslides** Rajib Sarkar, B.K. Maheshwari, Abhishek Kumar, 2025-05-23 This book will present the select proceedings of the 8th International Conference on Recent Advances in Geotechnical Earthquake Engineering and Soil Dynamics 8ICRAGEE held at the Indian Institute of Technology IIT Guwahati between December 11 and 14 2024 It contains the latest research papers covering the contributions and accomplishments in geotechnical earthquake engineering and soil dynamics in the last four years The five volumes of the book cover a wide range of topics including but not limited to seismic hazard analysis wave propagation and site characterization dynamic properties and liquefaction of soils pile foundations offshore foundations seismic design of retaining structures and dams seismic slope stability and landslides dynamic soil structure interaction seismic design of structures Further recent developments on these topics are covered in different chapters This book will be valuable not only for researchers and professionals but also for drawing an agenda for future courses of action from the perspective of geotechnical earthquake engineering keeping the

national need at the forefront GeoVadis Ashish Juneja, Anil Joseph, Dasaka S. Murty, 2025-09-16 This book contains a prolific compilation of research on geotechnical engineering presented at the First Geotech Asia International Conference GAIC 2025. The papers reflect dynamic engagement of researchers, engineers and professionals from all over Asia to offer insights into ongoing developments and applied problem solving. This publication brings together contributions across 19 technical themes including cold region geotechnics, deep excavations, earthquake engineering, foundation systems and underground construction. It also delves into artificial intelligence and machine learning applications, environmental and transportation geotechnics, site characterisation, slope stability, embankments and dams and ground improvement techniques. It is intended for academics, practising engineers, consultants, contractors, industry professionals, government authorities and students involved in geotechnical research, education and design and implementation.
