

# DX6i Quick Start Guide

## 1. Install Main Receiver

To go and glow aircraft install the main receiver using protective foam and tape it in place using rubber bands or foam and tape strips. In electric airplanes or helicopters use double-sided foam tape to fasten the main receiver in place.

## 2. Install Remote Receiver

Using servo tape, mount the remote receiver keeping the remote antenna at least 1" away from the primary antenna. Ideally, the remote antenna will be oriented perpendicularly to the main receiver's antenna. Connect the main and remote receivers using the included 4' remote receiver lead.

## 3. Install AA Heavy-Duty or NiMH Batteries

Note: Observe polarity when installing batteries.

## 4. Charge Transmitter Batteries (Rechargeable Only)

If using rechargeable batteries it is imperative that you fully charge the transmitter. A charging jack is located on the left side of the transmitter. If rechargeable batteries are used they can be conveniently charged without removing them from the transmitter using the charge jack. Using the included wall-charger, leave the charger and batteries connected overnight (20-22 hours).

## 5. Bind Receiver

- Plug the bind plug into the receiver's BATT/RECV port. In systems utilizing a separate battery pack and 3-way switch, plug the bind plug into the charge jack.
- Power up the receiver. The LED on the receiver will be flashing.
- Move the sticks and potentiometers on the transmitter to the desired/default positions (low throttle and neutral control positions).
- Pull and hold the Trainer switch on the transmitter while turning the transmitter on. Release the trainer switch once the LEDs on the front of the transmitter flash.
- The LED on the receiver will go solid amber and the system will transmit after several seconds.
- Remove the bind plug from the charge jack or bind port.

C, D. Pull trainer switch, turn power on

## 6. Test System Battery Voltage

Lack of power to the receiver and servo is a leading cause of failure. If you are using a receiver pack, ensure that it is properly charged and check the voltage under load (RX/ST/TS). Do not fly if voltage is below 4.8V for a 4-cell pack. In systems using a BEC, ensure that you are not drawing more than the main electronic's recommended number of amps for your BEC/Speed control.

If an antenna, the voltage should fall below the receiver's operating threshold (3.3 volts), an interruption in the link may occur followed by a blinking light on the receiver.

Note: If the receiver power is cycled without cycling the transmitter, a blinking light will also occur. In this case, this does not indicate a problem if you the Tx power, and then the Rx, to reset the light.

## 7. Control Surface Check

Turn on the transmitter followed by the receiver and check that the direction of each channel is correct. Use the servo-reversing menu to change the servo direction if necessary. See page 20 in the DSM manual for details on servo reversing.

## 8. Be Bind the System

After you've set up your model, it's important to re-bind the system so the true low throttle position is stored. If the signal is lost, the throttle servo will drive to a low throttle safe position.

## 9. Range Check

## How to Range Check

- With the model sitting on the ground, stand 50 paces (approximately 70 feet/20 meters) away from the model.
- Face the model with the transmitter in your normal flying position. Place the transmitter in the Range Test screen and pull and hold the trainer switch on the top of the transmitter. This causes reduced power output from the transmitter.
- You should have total control of the model with the trainer switch pulled at 50 paces (50 feet/20 meters).
- If control issues arise, call the Spectrum Support Team at 1-877-566-4333 or go to [spectrumhobby.com](http://spectrumhobby.com) to find a local Spectrum distributor in your country of service.
