Agent-Based Modelling of Socio-Technical Systems Koen H. van Dam, Igor Nikolic, Zofia Lukszo, 2012-10-08 Decision makers in large scale interconnected network systems require simulation models for decision support The behaviour of these systems is determined by many actors situated in a dynamic multi actor multi objective and multi level environment How can such systems be modelled and how can the socio technical complexity be captured Agent

based modelling is a proven approach to handle this challenge This book provides a practical introduction to agent based modelling of socio technical systems based on a methodology that has been developed at TU Delft and which has been deployed in a large number of case studies The book consists of two parts the first presents the background theory and methodology as well as practical guidelines and procedures for building models In the second part this theory is applied to a number of case studies where for each model the development steps are presented extensively preparing the reader for creating own models

Starting with Agent-Based Modeling Ken Poole, 2024-10-19 Starting with Agent Based Modeling A Beginner's Guide to Simulating Complex Systems Are you curious about how systems like ecosystems economies or social networks behave Do you want to explore the world of simulations but don't know where to begin Starting with Agent Based Modeling is your gateway into understanding and creating your own agent based models from scratch This book is designed for beginners breaking down the complex concepts of agent based modeling into simple digestible steps Whether you're a student a researcher or a hobbyist you'll find clear explanations practical examples and hands on exercises to guide you through each stage of the modeling process You'll learn how individual agents interact within a system and how these interactions give rise to large scale patterns and behaviors What you'll discover Foundational concepts of agent based modeling explained in easy to understand language Practical examples across fields like economics biology and social science Step by step guidance on creating your own simulations even with no prior experience Insight into how agent based models are used to solve real world problems Take your first step into the world of simulations with confidence By the end of this book you'll have the knowledge and tools to build your own models and explore complex systems in an entirely new way Ready to dive in Grab your copy today and unlock the potential of agent based modeling Agent-based Models Nigel Gilbert, 2020

Agent based simulation has become increasingly popular as a modeling approach in the social sciences because it enables researchers to build models where individual entities and their interactions are directly represented The Second Edition of Nigel Gilbert's Agent Based Models introduces this technique considers a range of methodological and theoretical issues shows how to design an agent based model with a simple example offers some practical advice about developing verifying and validating agent based models and finally discusses how to plan an agent based modelling project publish the results and apply agent based modeling to formulate and evaluate social and economic policies An accompanying simulation using NetLogo and commentary on the program can be downloaded on the book's website <https://study.sagepub.com/researchmethods/qass/gilbert/agent-based-models-2e>

Empirical Agent-Based Modelling - Challenges and Solutions Alexander Smajgl, Olivier Barreteau, 2013-09-12 This instructional book showcases techniques to parameterise human agents in empirical agent based models ABM In doing so it provides a timely overview of key ABM methodologies and the most innovative approaches through a variety of empirical applications It features cutting edge research from leading academics and practitioners and will provide a guide for characterising and parameterising human agents in empirical ABM In order to facilitate learning this text shares the valuable experiences of other modellers in particular modelling situations Very little

has been published in the area of empirical ABM and this contributed volume will appeal to graduate level students and researchers studying simulation modeling in economics sociology ecology and trans disciplinary studies such as topics related to sustainability In a similar vein to the instruction found in a cookbook this text provides the empirical modeller with a set of recipes ready to be implemented Agent based modeling ABM is a powerful simulation modeling technique that has seen a dramatic increase in real world applications in recent years In ABM a system is modeled as a collection of autonomous decision making entities called agents Each agent individually assesses its situation and makes decisions on the basis of a set of rules Agents may execute various behaviors appropriate for the system they represent for example producing consuming or selling ABM is increasingly used for simulating real world systems such as natural resource use transportation public health and conflict Decision makers increasingly demand support that covers a multitude of indicators that can be effectively addressed using ABM This is especially the case in situations where human behavior is identified as a critical element As a result ABM will only continue its rapid growth This is the first volume in a series of books that aims to contribute to a cultural change in the community of empirical agent based modelling This series will bring together representational experiences and solutions in empirical agent based modelling Creating a platform to exchange such experiences allows comparison of solutions and facilitates learning in the empirical agent based modelling community Ultimately the community requires such exchange and learning to test approaches and thereby to develop a robust set of techniques within the domain of empirical agent based modelling Based on robust and defensible methods agent based modelling will become a critical tool for research agencies decision making and decision supporting agencies and funding agencies This series will contribute to more robust and defensible empirical agent based modelling

Agent Based Models Edmund Chattoe-Brown, 2020 An agent based model ABM is the product of a research method that represents social processes as a particular type of computer programme using special software This distinguishes it from representations in well known social science research methods like equations found in regression models or narratives found in ethnographic analysis The entry begins by illustrating the method using an example of innovation diffusion justifies its distinctive methodology and distinguishes it from existing quantitative and qualitative methodologies discusses the different uses to which an ABM can be put and how one justifies the claim that these uses have been effective scientifically presents the challenges and opportunities of interfacing agent based modelling with existing and novel social science data demonstrates the hazards of unsystematic agent based modelling research relative to existing approaches shows what is necessary for agent based modelling to become a progressive research method producing models of steadily improving quality over time looks at a range of practical challenges researchers may face in applying agent based modelling relates the unique contribution of agent based modelling and its methodology to its potential role in prediction and effective policy and presents conclusions about how agent based modelling can develop and improve itself in the future The aim of the entry is to offer the reader an overview of some of the

major issues in the field and provide a starting point for them to build or evaluate ABMs relevant to their own research interests

Agent-Based Models Nigel Gilbert, 2019-12-17 Agent based simulation has become increasingly popular as a modeling approach in the social sciences because it enables researchers to build models where individual entities and their interactions are directly represented The Second Edition of Nigel Gilbert's *Agent Based Models* introduces this technique considers a range of methodological and theoretical issues shows how to design an agent based model with a simple example offers some practical advice about developing verifying and validating agent based models and finally discusses how to plan an agent based modelling project publish the results and apply agent based modeling to formulate and evaluate social and economic policies A website to accompany the book includes a simulation using NetLogo

The Truth about Agent-Based Modeling Brian Heath, 2011 The popularity of Agent Based Modeling ABM in both research and in practice has taken off with the introduction of personal computers and the acceptance of computer based experiments However the quick and widespread popularity of ABM has resulted in many shortcomings and gaps that hinders it from truly being a revolution in modeling and simulation This book looks at the truth behind ABM and develops original ideas and tools to help fill in the theoretical historical and practical gaps To get to the truth behind ABM the field of ABM is examined from many perspectives First complex systems the historical emergence of ABM and philosophical issues related to ABM are examined to establish a clear foundation Next the current practice of ABM is investigated through a comprehensive 279 article Based on these opportunities identified in the survey a new diagramming technique called the Conceptual Model for Simulation CM4S Diagram is developed Finally the effectiveness of the CM4S Diagram is evaluated through the development of social science military and supply chain ABM simulations
