An Introduction to Formal Languages and The School in the Cloud Sugata Mitra, 2019-08-14 The Science and the Story of the Future of Learning Educators have been trying to harness the promise of technology in education for decades to no avail but we have learned that children in groups when given access to the Internet can learn anything by themselves. In this groundbreaking book you'll glimpse the emerging future of learning with technology. It turns out the promise isn't in the technology itself; it's in the self-directed learning of the children who use it. In 1999 Sugata Mitra conducted the famous Hole in the Wall experiment that inspired three TED Talks and earned him the first million dollar TED prize for research. In 2013 Since then he has conducted new research around self-organized learning environments. **SOLE** building Schools in the Cloud all over the world. This new book shares the results of this research and offers Examples of thriving Schools in the Cloud in unlikely places. Mitra's predictions on the future of learning. How to design assessments for self-organizing learning. How to build your own School in the Cloud. Clips from the documentary *The School in the Cloud*. Discover the future of learning by digging deep into Mitra's thought-provoking experiences, examples, and vision.

Cybernetic Circulation Complex Nick Dyer-Witheford, Alessandra Mularoni, 2025-02-11 An anti-capitalist guide to breaking the power of Big Tech. Big Tech firms dominate the global economy. But what value do they actually produce? In this brilliant survey of global tech economy Nick Dyer-Witheford and Alessandra Mularoni argue that the role of firms like Amazon and Google, Palantir and Uber is in the automation of circulation. By applying digital technologies to processes of market exchange everything from advertising and shopping to logistics and financial services. Big Tech aims to subject these activities to the level of control and predictability that capital has secured in industrial production. But there is a way out of the multiple crises that Big Tech has helped precipitate. If we are to break their grip on the global economy then it'll take more than just antitrust legislation or reducing individual time online. By understanding the central role Big Tech plays in contemporary capitalism Dyer-Witheford and Mularoni argue that what is required instead is a new ambitious and comprehensive program of democratic collective planning that can move us beyond capitalism. *Cybernetic Circulation*

John Oommen, 1984 **Multi-Automata Learning** Verbeeck Katja, 2008 **Function Optimization-based Schemes for Designing Continuous Action Learning Automata** Haoye Lu, 2019 The field of Learning Automata LA has been studied and analyzed extensively for more than four decades however almost all the papers have concentrated on the LA working in Environments that have a finite number of actions This is a well established model of computation and expedient epsilon optimal and absolutely expedient machines have been designed for stationary and non stationary Environments There are only a few papers which deal with Environments possessing an infinite number of actions These papers assume a well defined and rather simple uni modal

functional form like the Gaussian function for the Environment's infinite reward probabilities. This thesis pioneers the concept and presents a series of continuous action LA CALA algorithms that do not require the function of the Environment's infinite reward probabilities to obey a well established uni modal functional form. Instead this function can be but not limited to a multi modal function as long as it satisfies some weak constraints. Moreover as our discussion evolves the constraints are further relaxed. In all these cases we demonstrate that the underlying machines converge in an epsilon optimal manner to the optimal action of an infinite action set. Based on the CALA algorithms proposed we report a global maximum search algorithm which can find the maximum points of a real valued function by sampling the function's values that could be contaminated by noise. This thesis also investigates the performance limit of the action taking scheme sampling actions based on probability density functions which is used by all currently available CALA algorithms. In more details given a reward function we define an index of the function which is the least upper bound of the performance that a CALA algorithm can possibly achieve. Besides we also report a CALA algorithm that meets this upper bound in an epsilon optimal manner. By investigating the problem from a different perspective we argue that the algorithms proposed are closely related to the family of Stochastic Point Location problems involving either discretized steps or d ary parallel machines. The thesis includes the detailed proofs of the assertions and highlights the niche contributions within the broader theory of learning. To the best of our knowledge there are no comparable results reported in the literature. Discretized Pursuit Linear Reward-inaction Learning Automata B. John Oommen, Joseph K. Lanctôt, 1989. This improved scheme is proven to be optimal in probability implying ϵ optimality in all stationary environments. Furthermore our experimental results seem to indicate that the algorithm presented in this paper is the fastest absorbing learning automaton reported in the literature to date. Comparison with the continuous form of the pursuit algorithm are also presented.
