## **Distributed Event Based Systems:**

**Distributed Event-Based Systems** Gero Mühl, Ludger Fiege, Peter Pietzuch, 2006-08-02 In today's world services and data are integrated in ever new constellations requiring the easy flexible and scalable integration of autonomous heterogeneous components into complex systems at any time Event based architectures inherently decouple system components Event based components are not designed to work with specific other components in a traditional request reply mode but separate communication from computation through asynchronous communication mechanisms via a dedicated notification service Mühl Fiege and Pietzuch provide the reader with an in depth description of event based systems They cover the complete spectrum of topics ranging from a treatment of local event matching and distributed event forwarding algorithms through a more practical discussion of software engineering issues raised by the event based style to a presentation of state of the art research topics in event based systems such as composite event detection and security Their presentation gives researchers a comprehensive overview of the area and lots of hints for future research In addition they show the power of event based architectures in modern system design thus encouraging professionals to exploit this technique in next generation large scale distributed applications like information dissemination network monitoring enterprise application integration or mobile systems
