Moving Target Defense Based on Artificial Intelligence Tao Zhang, Xiangyun Tang, Jiawen Kang, Changqiao Xu, 2025-09-30 Moving Target Defense MTD has been proposed as an innovative defense framework which aims to introduce the dynamics diversity and randomization into static network by the shuffling heterogeneity and redundancy It is born to solve the problem that traditional security solutions respond and defend against security threats after attacks occurrence which will lead to the defender always having disadvantages in attack defense confrontation This book explores the challenges and solutions related to moving target defense in the cloud edge terminal networks This book fills this gap by providing a comprehensive and detailed approach to designing intelligent MTD frameworks for cloud edge terminal networks It is essential reading for researchers and professionals in network security and artificial intelligence who seek innovative defense solutions The book is organized into 6 chapters each addressing a key area of MTD and its integration with Artificial Intelligence Chapter 1 introduces the fundamental concepts of MTD security challenges in cloud edge terminal networks and the role of artificial intelligence in enhancing MTD Chapter 2 delves into host address mutation based on advantage actor critic approach Chapter 3 proposes a collaborative mutation based MTD based on hierarchical reinforcement learning Chapter 4 presents roadside units

configuration mutation based on proximal policy optimization approach Chapter 5 explores route mutation based on multiagent reinforcement learning Chapter 6 provides a summary of insights and lessons learned throughout the book and outlines future research directions in MTD

Modeling and Evaluating Denial of Service Attacks for Wireless and Mobile Applications Zhou Lu, Wenye Wang, Cliff Wang, 2015-11-05 This SpringerBrief covers modeling and analysis of Denial of Service attacks in emerging wireless and mobile applications It uses an application specific methodology to model and evaluate denial of service attacks Three emerging applications are explored multi modal CSMA CA networks time critical networks for the smart grid and smart phone applications The authors define a new performance metric to quantify the benefits of backoff misbehavior and show the impacts of a wide range of backoff mishandling nodes on the network performance and propose a scheme to minimize the delay of time critical message delivery under jamming attacks in smart grid applications An investigation on the resilience of mobile services against malware attacks is included to advance understanding of network vulnerabilities associated with emerging wireless networks and offers instrumental guidance into the security design for future wireless and mobile applications This book is appropriate for students faculty engineers and experts in the technical area of wireless communication mobile networks and cyber security

Distributed Denial of Service Attacks İlker Özçelik, Richard Brooks, 2020-08-03 Distributed Denial of Service DDoS attacks have become more destructive wide spread and harder to control over time This book allows students to understand how these attacks are constructed the security flaws they leverage why they are effective how they can be detected and how they can be mitigated Students use software defined networking SDN technology to create and execute controlled DDoS experiments They learn how to deploy networks analyze network performance and create resilient systems This book is used for graduate level computer engineering instruction at Clemson University It augments the traditional graduate computing curricula by integrating Internet deployment network security ethics contemporary social issues and engineering principles into a laboratory based course of instruction Unique features of this book include A history of DDoS attacks that includes attacker motivations Discussion of cyber war censorship and Internet black outs SDN based DDoS laboratory assignments Up to date review of current DDoS attack techniques and tools Review of the current laws that globally relate to DDoS Abuse of DNS NTP BGP and other parts of the global Internet infrastructure to attack networks Mathematics of Internet traffic measurement Game theory for DDoS resilience Construction of content distribution systems that absorb DDoS attacks This book assumes familiarity with computing Internet design appropriate background in mathematics and some programming skills It provides analysis and reference material for networking engineers and researchers By increasing student knowledge in security and networking it adds breadth and depth to advanced computing curricula

Distributed Denial of Service (DDoS) Attacks Brij B. Gupta, Amrita Dahiya, 2021-02-28 The complexity and severity of the Distributed Denial of Service DDoS attacks are increasing day by day The Internet has a highly inconsistent structure in terms of resource distribution Numerous technical

solutions are available but those involving economic aspects have not been given much consideration The book DDoS Attacks Classification Attacks Challenges and Countermeasures provides an overview of both types of defensive solutions proposed so far exploring different dimensions that would mitigate the DDoS effectively and show the implications associated with them Features Covers topics that describe taxonomies of the DDoS attacks in detail recent trends and classification of defensive mechanisms on the basis of deployment location the types of defensive action and the solutions offering economic incentives Introduces chapters discussing the various types of DDoS attack associated with different layers of security an attacker s motivations and the importance of incentives and liabilities in any defensive solution Illustrates the role of fair resource allocation schemes separate payment mechanisms for attackers and legitimate users negotiation models on cost and types of resources and risk assessments and transfer mechanisms DDoS Attacks Classification Attacks Challenges and Countermeasures is designed for the readers who have an interest in the cybersecurity domain including students and researchers who are exploring different dimensions associated with the DDoS attack developers and security professionals who are focusing on developing defensive schemes and applications for detecting or mitigating the DDoS attacks and faculty members across different universities *Distributed Denial of Service Attacks* Rajeev Singh,Mangey Ram,2021-07-19 This book presents new concepts against Distributed Denial of Service DDoS attacks It follows a systematic approach providing cryptographic and mathematical solutions that include aspects of encryption decryption hashing techniques digital signatures authentication probability statistical improvements to machine learning and soft computing as well as latest trends like blockchains to mitigate DDoS attacks **D-WARD** Jelena Mirkovic,2003 **An Investigation into the Detection and Mitigation of Denial of Service (DoS) Attacks** S.V. Raghavan,E Dawson,2011-09-29 Around the globe nations face the problem of protecting their Critical Information Infrastructure normally referred to as Cyber Space In this monograph we capture FIVE different aspects of the problem High speed packet capture Protection through authentication Technology Transition Test Bed Simulation and Policy and Legal Environment The monograph is the outcome of over three years of cooperation between India and Australia *Distributed Denial of Service-Defense Attack Tradeoff Analysis (DDOS-DATA)*. ,2004 The project uses modeling and simulation to analyze performance of mitigation technologies to combat Distributed Denial of Service Attacks The system also determines how an attacker can react to mitigation technologies and how mitigation technologies can be layered to reduce attacker effectiveness **A Review of Distributed Denial of Service Attacks and Defence's Models** Ashley Chonka,Wanlei Zhou,Deakin University. School of Engineering and Information Technology,2007 **Evaluation of a Multi-Agent System for Simulation and Analysis of Distributed Denial-of-Service Attacks** Tee Huu,2003-12-01 DDoS attack is evolving at a rapid and alarming rate an effective solution must be formulated using an adaptive approach Most of the simulations are performed at the attack phase of the DDoS attack thus the defense techniques developed focus mainly on filtering and isolating the attack In order to develop and verify

the effectiveness of a defense strategy we needed a robust and flexible simulation tool The Multi Agent System Development Kit MASDK provided us a means to generate DDoS attack in a safe experimental environment for testing and validating security solutions starting from the implantation phase this allows researchers to develop new defense strategy even before the DDoS attack is launched The paper begins with the study of the characteristics of DDoS attacks the types of detection and response techniques and the available DDoS attack simulation tools The result generated by the MASDK simulation tool was used to evaluate the performance of the tool in simulating the DDoS attack over the networking environment

Mitigating Distributed Denial-of-Service Attacks Zhang Fu,2010 *Network Attack Traceback And React* Edmond K. Machie,2013-05-10 Analysis of Defenses Against Distributed Denial of Service Attacks ,2006 Distributed Denial of Service DDoS attacks are attempts to overwhelm a computer system to deny access by legitimate users This paper will describe the design of a model to study ways to defend against these attacks Three experiments are run 1 using a priority queue to sort messages from clients 2 limiting the number of connections each client can create and 3 having the server delete the oldest established connection Results show that method 1 is ineffective while method 2 somewhat improves overall performance However method 3 combined with method 2 produces significantly improved performance against a DDoS attack Investigation of a Router-based Approach to Defense Against Distributed Denial-of-Service (DDoS) Attack Yik-Kwan Chan (Eric),University of Hong Kong,2004 **On SMURF - Based Distributed Denial of Service (DDoS) Attacks in Computer Networks** Montasir Azad,2006 Distributed Denial of Service (DDoS) Attacks and IoT Security Eric Wang,Robert Joodat,2017-09-20 Technical Report from the year 2017 in the subject Computer Science IT Security grade N A University of Technology Sydney language English abstract The purpose of this report investigates the present state of Internet of Things IoT devices It highlights the current security issues of using IoT devices and discusses its possible solutions to maximise security and minimise DDoS and cyberattacks The measures that needs to be considered to prevent attacks on IoT devices from Mirai botnet has been highlighted which include the use of cloudflare s orbit and other general security practices Cloudflare s orbit allows manufactures to implement virtual patches for vulnerabilities found in IoT devices until those vulnerabilities are fixed through software updates **Multifaceted Defense Against Distributed Denial of Service Attacks** Zhang Fu,Chalmers tekniska högskola,Chalmers tekniska högskola.
