*The Attachment, Caregiving, and Sexual Systems Relationship to Conflict Communication in Adult-pair-bond Relationships* Steven M. Jacobson, 2003

*Attachment Theory and the Psychoanalytic Process* Mauricio Cortina, Mario Marrone, 2003

Attachment theory the brainchild of child psychiatrist and psychoanalyst John Bowlby has begun to have a worldwide impact among clinicians within the last ten years This interest marks a departure from the early fate of attachment theory At first shunned by the psychoanalytic community Bowlby's brilliant and groundbreaking effort to recast basic psychoanalytic concepts within system theories and a new ethologically based model of the importance of affectional ties across the life span was taken up by a group of gifted developmental researchers Empirical research not only tested and confirmed many basic propositions of attachment theory but also extended Attachment theory in unexpected and creative ways Bowlby was surprised and gratified by this turn of events but also disappointed that his intended clinical audience has not taken the theory and run with it This edited book is in part a testament to the fact that clinicians are beginning to do just that they are taking Attachment theory and research creatively to examine clinical issues In doing so new vistas and hypothesis are being put forward showing that Attachment theory is alive and well In this volume the editors gathered a distinguished group of clinician scholars from around the world Argentina Italy Mexico UK USA and Spain to examine and extend Bowlby's legacy The book should be of interest to clinicians regardless of their orientation Attachment theory cuts across boundaries of clinical modalities individual group or family therapy and orientations psychoanalytic cognitive or behavioural The book should also be of interest to researchers who may find the heuristic value of clinical insights a valuable addition to the legacy of Attachment theory

**The Challenge of Attachment for Caregiving** Dorothy Heard, Brian Lake, 2018-06-12

The Challenge of Attachment for Caregiving describes a theoretical model for the development

of caregiving that complements and also extends attachment theory. The model highlights the conditions under which adult caregivers can remain in a state of arrested development impairing their own ability to give care and resulting in attachment problems for those who seek care from them. It shows how insecure attachment in childhood and adolescence impedes the development of caregiving and how in times of crisis even securely attached individuals need appropriate support in order to sustain their capacity to give effective care. Constructing a systemic model of the self, the authors place the instinctive systems for caregiving and careseeking attachment within a theory that relates them to other systems of the self such as the systems for sharing interests, sexuality and for self defence. The model describes the interplay between these goal corrected behavioural systems. Because it includes the defensive mechanisms and strategies which an individual values most, it is particularly helpful to the therapist in understanding the interpersonal processes between people who are seeking to influence each other's behaviour. It is presented in a form that enables the therapist to formulate hypotheses about a client's predicament and their way of relating to the therapist and then explore and test these hypotheses in the course of therapy. Drawing on many years' experience as clinicians and researchers, Dorothy Heard and Brian Lake explore in depth an aspect of human development which has profound implications for our future survival. Presenting its own challenge to both theory and practice, this book offers students and practitioners a new perspective on attachment.

The Adult Attachment Projective Picture System Carol George, Malcolm L. West, 2012-04-10 This book presents cutting edge research on adult attachment together with a complete overview of the Adult Attachment Projective Picture System (AAP). The authors validated developmental assessment. In addition to identifying attachment classification groups, the AAP yields important information about dimensions including defensive processes not evaluated by other available measures. Detailed case illustrations show what the AAP looks like in action and what it reveals about individuals' early experiences, sense of self and capacity to engage in close protective relationships. The AAP can be used in clinical or research settings; the concluding chapter discusses promising applications to studying the neurobiology of attachment.

*Assessing Disorganized Attachment Behaviour in Children* David Shemmings, Yvonne Shemmings, 2014-03-21 Presenting an evidence based model for assessing children with disorganized attachment and their adult carers, this book outlines key indicators of child maltreatment and effective interventions for child protection workers.
