today's biggest trends Hierarchical Distributed Fog-to-cloud Data Management in Smart Cities Amir Sinaeepourfard, 2018

There is a vast amount of data being generated every day in the world with different formats quality levels etc This new data together with the archived historical data constitute the seed for future knowledge discovery and value generation in several fields of science and big data environments Discovering value from data is a complex computing process where data is the key resource not only during its processing but also during its entire life cycle However there is still a huge concern about how to organize and manage this data in all fields for efficient usage and exploitation during all data life cycles Although several specific Data LifeCycle DLC models have been recently defined for particular scenarios we argue that there is no global and comprehensive DLC framework to be widely used in different fields In particular scenario smart cities are the current technological solutions to handle the challenges and complexity of the growing urban density Traditionally Smart City resources management rely on cloud based solutions where sensors data are collected to provide a centralized and rich set of open data The advantages of cloud based frameworks are their ubiquity as well as an almost unlimited resources capacity However accessing data from the cloud implies large network traffic high latencies usually not appropriate for real time or critical solutions as well as higher security risks Alternatively fog computing emerges as a promising technology to absorb these inconveniences It proposes the use of devices at the edge to provide closer computing facilities and therefore reducing network traffic reducing latencies drastically while improving security We have defined a new framework for data management in the context of a Smart City through a global fog to cloud resources management architecture This model has the advantages of both fog and cloud technologies as it allows reduced latencies for critical applications while being able to use the high computing capabilities of cloud technology In this thesis we propose many novel ideas in the design of a novel F2C Data Management architecture for smart cities as following First we draw and describe a comprehensive scenario agnostic Data LifeCycle model successfully addressing all challenges included in the 6Vs not tailored to any specific environment but easy to be adapted to fit the requirements of any particular field Then we introduce the Smart City Comprehensive Data LifeCycle model a data management architecture generated from a comprehensive scenario agnostic model tailored for the particular scenario of Smart Cities We define the management of each data life phase and explain its implementation on a Smart City with Fog to Cloud F2C resources management And then we illustrate a novel architecture for data management in the context of a Smart City through a global fog to cloud resources management architecture We show this model has the advantages of both fog and cloud as it allows reduced latencies for critical applications while being able to use the high computing capabilities of cloud technology As a first experiment for the F2C data management architecture a real Smart City is analyzed corresponding to the city of Barcelona with special emphasis on the layers responsible for collecting the data generated by the deployed sensors The amount of daily sensors data transmitted through the network has been estimated and a rough projection has been made assuming an exhaustive deployment that fully covers

all city And we provide some solutions to both reduce the data transmission and improve the data management Then we used some data filtering techniques including data aggregation and data compression to estimate the network traffic in this model during data collection and compare it with a traditional real system Indeed we estimate the total data storage sizes through F2C scenario for Barcelona smart cities Fundamentals of Cloud Computing Mr.S.Sumahasan,Dr.Udaya Kumar Addanki,Dr.V.Lakshmana Rao,Dr.K.Purushotham Naidu,2025-02-04 Mr S Sumahasan Assistant Professor Department of Computer Science Engineering GVP College of Engineering for Women Autonomous Visakhapatnam Andhra Pradesh India Dr Udaya Kumar Addanki Assistant Professor Department of Artificial Intelligence Anurag University Hyderabad Telangana India Dr V Lakshmana Rao Associate Professor Department of Computer Science Engineering GVP College of Engineering for Women Autonomous Visakhapatnam Andhra Pradesh India Dr K Purushotham Naidu Associate Professor Department of Computer Science Engineering AI ML GVP College of Engineering for Women Autonomous Visakhapatnam Andhra Pradesh India
