Distributed Programming with Ruby Mark Bates,2009-11-05 Complete Hands On Guide to Building Advanced Distributed Applications with Ruby Distributed programming techniques make applications easier to scale develop and deploy especially in emerging cloud computing environments Now one of the Ruby community s leading experts has written the first definitive guide to distributed programming with Ruby Mark Bates begins with a simple distributed application and then walks through an increasingly complex series of examples demonstrating solutions to the most common distributed programming problems Bates presents the industry s most useful coverage of Ruby s standard distributed programming libraries DRb and Rinda Next he introduces powerful third party tools frameworks and libraries designed to simplify Ruby distributed programming including his own Distribunaut If you re an experienced Ruby programmer or architect this hands on tutorial and practical reference will help you meet any distributed programming challenge no matter how complex Coverage includes Writing robust secure and interactive applications using DRb and managing its drawbacks Using Rinda to build applications with improved flexibility fault tolerance and service discovery Simplifying DRb service management with RingyDingy Utilizing Starfish to facilitate communication between distributed programs and to write MapReduce functions for processin large data sets Using Politics to customize the processes running on individual server instances in a cloud computing environment Providing reliable distributed queuing with the low overhead Starling messaging server Implementing comprehensive enterprise messaging with RabbitMQ and Advanced Message Queuing Protocol AMQP Offloading heavyweight tasks with BackgrounDRb and DelayedJob **Practical Distributed Processing** Phillip J. Brooke,Richard F. Paige,2007-09-05 Distributed processing has a strong theoretical foundation but many day to day practitioners make limited use of the advantages this theory can give them The result includes unreliable systems with obscure and intermittent failures that can cost time money and in extreme cases lives Reliable construction of distributed and concurrent systems must incorporate theory in practice This book provides a concise presentation of the theory closely linked to the practical realization of these concepts This highly practical presentation contains all the elements needed for a complete development of a distributed system The book includes examples from C Java and Eiffel and sample code is available online **Proceedings of the 4th Many-Core Applications Research Community (MARC) Symposium** Peter Tröger,Andreas Polze,2012 In continuation of a successful series of events the 4th Many core Applications Research Community MARC symposium took place at the HPI in Potsdam on December 8th and 9th 2011 Over 60 researchers from different fields presented their work on many core hardware architectures their programming models and the resulting research questions for the upcoming generation of heterogeneous parallel systems *Distributed Systems with Node.js* Thomas Hunter II,2020-11-04 Many companies from startups to Fortune 500 companies alike use Node js to build performant backend services And engineers love Node js for its approachable API and familiar syntax Backed by the world s largest package repository Node s enterprise foothold is only

expected to grow In this hands on guide author Thomas Hunter II proves that Node js is just as capable as traditional enterprise platforms for building services that are observable scalable and resilient Intermediate to advanced Node js developers will find themselves integrating application code with a breadth of tooling from each layer of a modern service stack Learn why running redundant copies of the same Node js service is necessary Know which protocol to choose depending on the situation Fine tune your application containers for use in production Track down errors in a distributed setting to determine which service is at fault Simplify app code and increase performance by offloading work to a reverse proxy Build dashboards to monitor service health and throughput Find out why so many different tools are required when operating in an enterprise environment **On the Move to Meaningful Internet Systems 2005: CoopIS, DOA, and ODBASE** R.
