Text Mining Sholom M. Weiss,Nitin Indurkha,Tong Zhang,Fred Damerau,2010-01-08 Data mining is a mature technology The prediction problem looking for predictive patterns in data has been widely studied Strong methods are available to the practitioner These methods process structured numerical information where uniform measurements are taken over a sample of data Text is often described as unstructured information So it would seem text and numerical data are different requiring different methods Or are they In our view a prediction problem can be solved by the same methods whether the data are structured numerical measurements or unstructured text Text and documents can be transformed into measured values such as the presence or absence of words and the same methods that have proven successful for predictive data mining can be applied to text Yet there are key differences Evaluation techniques must be adapted to the chronological order of publication and to alternative measures of error Because the data are documents more specialized analytical methods may be preferred for text Moreover the methods must be modified to accommodate very high dimensions tens of thousands of words and documents Still the central themes are similar *Text Mining with Machine Learning* Jan Žižka,František Dařena,Arnošt Svoboda,2019-10-31 This book provides a perspective on the application of machine learning based methods in knowledge discovery from natural languages texts By analysing various data sets conclusions which are not normally evident emerge and can be used for various purposes and applications The book provides explanations of principles of time proven machine learning algorithms applied in text mining together with step by step demonstrations of how to reveal the semantic contents in real world datasets using the popular R language with its implemented machine learning algorithms The book is not only aimed at IT specialists but is meant for a wider audience that needs to process big sets of text documents and has basic knowledge of the subject e g e mail service providers online shoppers librarians etc The book starts with an introduction to text based natural language data processing and its goals and problems It focuses on machine learning presenting various algorithms with their use and possibilities and reviews the positives and negatives Beginning with the initial data pre processing a reader can follow the steps provided in the R language including the subsuming of various available plug ins into the resulting software tool A big advantage is that R also contains many libraries implementing machine learning algorithms so a reader can concentrate on the principal target without the need to implement the details of the algorithms her or himself To make sense of the results the book also provides explanations of the algorithms which supports the final evaluation and interpretation of the results The examples are demonstrated using realworld data from

any kind Based on state of the art techniques from machine learning and other areas of artificial intelligence novel pipeline construction and execution algorithms are developed and implemented in prototypical software Formal analyses of the algorithms and extensive empirical experiments underline that the proposed approach represents an essential step towards the ad hoc use of text mining in web search and big data analytics Both web search and big data analytics aim to fulfill peoples needs for information in an adhoc manner The information sought for is often hidden in large amounts of natural language text Instead of simply returning links to potentially relevant texts leading search and analytics engines have started to directly mine relevant information from the texts To this end they execute text analysis pipelines that may consist of several complex information extraction and text classification stages Due to practical requirements of efficiency and robustness however the use of text mining has so far been limited to anticipated information needs that can be fulfilled with rather simple manually constructed pipelines
