Enabling Manufacturing Competitiveness and Economic Sustainability Hoda A. ElMaraghy, 2011-09-29 The changing manufacturing environment requires more responsive and adaptable manufacturing systems The theme of the 4th International Conference on Changeable Agile Reconfigurable and Virtual production CARV2011 is Enabling Manufacturing Competitiveness and Economic Sustainability Leading edge research and best implementation practices and experiences which address these important issues and challenges are presented The proceedings include advances in manufacturing systems design planning evaluation control and evolving paradigms such as mass customization personalization changeability re configurability and flexibility New and important concepts such as the dynamic product families and platforms co evolution of products and systems and methods for enhancing manufacturing systems economic sustainability and prolonging their life to produce more than one product generation are treated Enablers of change in manufacturing systems production volume and capability scalability and managing the volatility of markets competition among global enterprises and the increasing complexity of products manufacturing systems and management strategies are discussed Industry challenges and future directions for research and development needed to help both practitioners and academicians are presented

Dynamics in Logistics Hans-Jörg Kreowski, Bernd Scholz-Reiter, Klaus-Dieter Thoben, 2013-03-28 The volume comprises the proceedings of the third International Conference on Dynamics in Logistics LDIC 2012 The scope of the conference targeted the identification analysis and description of the dynamics of logistic processes and networks The spectrum ranged from the modeling and planning of processes and innovative methods like autonomous control and knowledge management to the new technologies provided by radio frequency identification mobile communication and networking The growing dynamics in the area of logistics poses completely new challenges Logistic processes and networks must rapidly and flexibly adapt to continuously changing conditions LDIC 2012 provided a venue for researchers from academia and industry interested in the technical advances in dynamics in logistics The conference addressed research in logistics from a wide range of fields e g engineering computer science and operations research The volume consists of two invited papers and of 49 contributed papers divided into various subjects including transport logistics routing in dynamic logistic networks modeling simulation optimization and collaboration in logistics identification technologies mathematical modeling in transport and production logistics information communication risk and failure in logistic systems autonomous control in logistic processes global supply chains and industrial applications and the Internet of Things in the context of logistics **Advances in The**

Ergonomics in Manufacturing: Managing the Enterprise of the Future Stefan Trzcielinski, Waldemar Karwowski, 2020-07-19 Contemporary manufacturing enterprises aim to deliver a great number of consumer products and systems through friendly and satisfying working environments for people who are involved in manufacturing services

Meeting the needs of the manufacturing and service sectors of contemporary industry this volume is concerned with the human factors ergonomics and safety issues related to the design of products processes and systems as well as the operation and management of business enterprises This book will be of special value to researchers and practitioners involved in the design of products processes systems and services which are marketed and utilized by a variety of organizations around the world

Robust Manufacturing Control Katja Windt,2012-12-14 This contributed volume collects research papers presented at the CIRP Sponsored Conference Robust Manufacturing Control Innovative and Interdisciplinary Approaches for Global Networks RoMaC 2012 Jacobs University Bremen Germany June 18th 20th 2012 These research papers present the latest developments and new ideas focusing on robust manufacturing control for global networks Today Global Production Networks i e the nexus of interconnected material and information flows through which products and services are manufactured assembled and distributed are confronted with and expected to adapt to sudden and unpredictable large scale changes of important parameters which are occurring more and more frequently event propagation in networks with high degree of interconnectivity which leads to unforeseen fluctuations and non equilibrium states which increasingly characterize daily business These multi scale changes deeply influence logistic target achievement and call for robust planning and control strategies Therefore understanding the cause and effects of multi scale changes in production networks is of major interest New methodological approaches from different science disciplines are promising to contribute to a new level comprehension of network processes Unconventional methods from biology perturbation ecology or auditory display are gaining increasing importance as they are confronted with similar challenges Advancements from the classical disciplines such as mathematics physics and engineering are also becoming of continuing importance
