El-Deiry,2008-02-03 It has become clear that tumors arise from excessive cell proliferation and a c responding reduction in cell death Tumors result from the successive accumulation of mutations in key regulatory target genes over time During the 1980s a number of oncogenes were characterized whereas from the 1990s to the present the emphasis shifted to tumor suppressor genes TSGs It has become clear that oncogenes and tumor suppressor genes function in the same pathways providing positive and ne tive growth regulatory activities The signaling pathways controlled by these genes involve virtually every process in cell biology including nuclear events cell cycle cell death cytoskeletal cell membrane angiogenesis and cell adhesion effects Tumor suppressor genes are mutated in hereditary cancer syndromes as well as somatically in nonhereditary cancers In their normal state TSGs control cancer development and p gression as well as contribute to the sensitivity of cancers to a variety of therapeutics Understanding the classes of TSGs the biochemical pathways they function in and how they are regulated

provides an essential lesson in cancer biology We cannot hope to advance our current knowledge and to develop new and more effective therapies without understanding the relevant pathways and how they influence the present approaches to therapy Moreover it is important to be able to access the powerful tools now available to discover these genes as well as their links to cell biology and growth control

**Geospatial Techniques in Urban Hazard and Disaster Analysis** Pamela S. Showalter, Yongmei Lu, 2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense The material presented here is also unabashedly applied our goal is to provide GIT tools to those seeking more efficient ways to respond to recover from mitigate prevent and or model hazard and disaster events in urban settings Therefore this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners We also believe graduate students will find the material presented here of interest as may upper division undergraduate students
