George Arthur Frederick Seber,2016-03-21 Many people today believe that Christianity will not stand up to a scientific or intellectual investigation and that science has all the answers Such an attitude shows an ignorance of the wealth of available philosophical arguments and scientific information that Dr Seber taps into in this book Initially he shows that mathematics and science are limited in what they can prove in spite of modern advances He then summarizes his material using basic questions as ten chapter headings Does God exist is there a spiritual dimension do we have free will is the Bible reliable who is Jesus do miracles occur why does God allow suffering and evil is Christianity a blessing or a curse to society what about evolution and how can we get to

know God The reader may have other questions and a number are considered within each chapter such as problems with philosophical materialism and atheism He draws his material from many sources including statistics physics cosmology genetics philosophy history biochemistry theology psychology archaeology and biology Comparatively new subjects like epigenetics chaos theory and quantum mechanics that many people are not aware of are brought into the picture These topics change our thinking about reality

**From Ecology to Brain Development: Bridging Separate Evolutionary Paradigms** Francisco Aboitiz, Miguel L. Concha, Christian González-Billault, Jorge Mpodozis, 2018-09-14 The nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures This special topic is oriented to develop an integrative view from behavior and ecology to neurodevelopmental processes We address questions such as how do sensory systems evolve according to ecological conditions How do neural networks organize to generate adaptive behavior How does cognition and brain connectivity evolve What are the developmental mechanisms that give rise to functional adaptation Accordingly the book is divided in three sections i Evolution of sensorimotor systems ii Cognitive computations and neural circuits and iii Development and brain evolution We hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome results of a compromise between different parameters rather than being the result of several single variables acting independently of each other
