Evolutionary Algorithms William M. Spears, 2000-06-15 Despite decades of work in evolutionary algorithms there remains an uncertainty as to the relative benefits and detriments of using recombination or mutation This book provides a characterization of the roles that recombination and mutation play in evolutionary algorithms It integrates important prior work and introduces new theoretical techniques for studying evolutionary algorithms Consequences of the theory are explored and a novel method for comparing search and optimization algorithms is introduced The focus allows the book to bridge multiple communities including evolutionary biologists and population geneticists American Book Publishing Record , 2000-07

**Advances in Evolutionary Computing** Ashish Ghosh, Shigeyoshi Tsutsui, 2012-12-06 The term evolutionary computing refers to the study of the foundations and applications of certain heuristic techniques based on the principles of natural evolution thus the aim of designing evolutionary algorithms EAs is to mimic some of the processes taking place in natural evolution These algorithms are classified into three main categories depending more on historical development than on major functional techniques In fact their biological basis is essentially the same Hence EC GA uGP uES uEP EC Evolutionary Computing GA Genetic Algorithms GP Genetic Programming ES Evolution Strategies EP Evolutionary Programming Although the details of biological evolution are not completely understood even nowadays there is some strong experimental evidence to support the following points Evolution is a process operating on chromosomes rather than on organisms Natural selection is the mechanism that selects organisms which are well adapted to the environment to reproduce more often than those which are not The evolutionary process takes place during the reproduction stage that includes mutation which causes the chromosomes of offspring to be different from those of the parents and recombination which combines the chromosomes of the parents to produce the offspring Based upon these features the previously mentioned three models of evolutionary computing were independently and almost simultaneously developed An evolutionary algorithm EA is an iterative and stochastic process that operates on a set of individuals called a population
