*Rethinking the Environmental Impacts of Renewable Energy* Alexander Clarke, 2016-08-25 Renewable energy is important as a substitute for finite fossil fuels and inflexible nuclear power and could conceivably power the world However this is challenging as the world is currently 80% dependent on fossil fuels and renewable sources produce only about 15% of total energy Conversion technologies for use with many of the eight different primary sources of renewable energy are only just emerging as viable technologies While renewable energy sources will not run out and their use involves little or no release of carbon dioxide or ionising wastes they do have local environmental impacts of their own This book analyses the nature of environmental impacts from renewable sources A novel method of assessing impacts is explored based on a set of parameters centred on how diffuse or concentrated the energy flow is The approach that is developed will inform engineers designers policy makers and planners as well as researchers in the area

**Routledge Handbook of Arctic Security**  
 Gunhild Hoogensen Gjørsv, Marc Lanteigne, Horatio Sam-Aggrey, 2020-01-09. The Routledge Handbook of Arctic Security offers a comprehensive examination of security in the region encompassing both state-based and militarized notions of security as well as broader security perspectives reflecting debates about changes in climate, environment, economies and societies. Since the turn of the century, the Arctic has increasingly been in the global spotlight, resulting in the often invoked idea of Arctic exceptionalism being questioned. At the same time, the unconventional political power which the Arctic's Indigenous peoples hold calls into question conventional ideas about geopolitics and security. This handbook examines security in this region, revealing contestations and complementarities between narrower state-based and or militarized notions of security and broader security perspectives reflecting concerns and debates about changes in climate, environment, economies and societies. The volume is split into five thematic parts: Theorizing Arctic Security, The Arctic Powers, Security in the Arctic through Governance, Non-Arctic States, Regional and International Organizations, People, States and Security. This book will be of great interest to students of Arctic politics, global governance, geography, security studies and International Relations.
