Plan, Activity, and Intent Recognition Gita Sukthankar,Christopher Geib,Hung Hai Bui,David Pynadath,Robert P. Goldman,2014-03-03 Plan recognition activity recognition and intent recognition together combine and unify techniques from user modeling machine vision intelligent user interfaces human computer interaction autonomous and multi agent systems natural language understanding and machine learning Plan Activity and Intent Recognition explains the crucial role of these techniques in a wide variety of applications including personal agent assistants computer and network security opponent modeling in games and simulation systems coordination in robots and software agents web e commerce and collaborative filtering dialog modeling video surveillance smart homes In this book follow the history of this research area and witness exciting new developments in the field made possible by improved sensors increased computational power and new application areas Combines basic theory on algorithms for plan activity recognition along with results from recent workshops and seminars Explains how to interpret and recognize plans and activities from sensor data Provides valuable background knowledge and assembles key concepts into one guide for researchers or students studying these disciplines *Intelligent Natural Language Processing: Trends and Applications* Khaled Shaalan,Aboul Ella Hassanien,Fahmy Tolba,2017-11-17 This book brings together scientists researchers practitioners and students from academia and industry to present recent and ongoing research activities concerning the latest advances techniques and applications of natural language processing systems and to promote the exchange of new ideas and lessons learned Taken together the chapters of this book provide a collection of high quality research works that address broad challenges in both theoretical and applied aspects of intelligent natural language processing The book presents the state of the art in research on natural language processing computational linguistics applied Arabic linguistics and related areas New trends in natural language processing systems are rapidly emerging and finding application in various domains including education travel and tourism and healthcare among others Many issues encountered during the development of these applications can be resolved by incorporating language technology solutions The topics covered by the book include Character and Speech Recognition Morphological Syntactic and Semantic Processing Information Extraction Information Retrieval and Question Answering Text Classification and Text Mining Text Summarization Sentiment Analysis Machine Translation Building and Evaluating Linguistic Resources and Intelligent Language Tutoring Systems *Algorithms in Advanced Artificial Intelligence* R. N. V. Jagan Mohan,B. H. V. S. Rama Krishnam Raju,V. Chandra Sekhar,T. V. K. P. Prasad,2025-05-23 Algorithms in Advanced Artificial Intelligence is a collection of papers on emerging issues challenges and new methods in Artificial Intelligence Machine Learning Deep Learning Cloud Computing Federated Learning Internet of Things and Blockchain technology It addresses the growing attention to advanced technologies due to their ability to provide paranormal solutions to problems associated with classical Artificial Intelligence frameworks AI is used in various subfields including learning perception and financial decisions It uses

four strategies Thinking Humanly Thinking Rationally Acting Humanly and Acting Rationally The authors address various issues in ICT including Artificial Intelligence Machine Learning Deep Learning Data Science Big Data Analytics Vision Internet of Things Security and Privacy aspects in AI and Blockchain and Digital Twin Integrated Applications in AI

   Advanced Machine Intelligence and Signal Processing Deepak Gupta,Koj Sambyo,Mukesh Prasad,Sonali Agarwal,2022-06-25 This book covers the latest advancements in the areas of machine learning computer vision pattern recognition computational learning theory big data analytics network intelligence signal processing and their applications in real world The topics covered in machine learning involve feature extraction variants of support vector machine SVM extreme learning machine ELM artificial neural network ANN and other areas in machine learning The mathematical analysis of computer vision and pattern recognition involves the use of geometric techniques scene understanding and modeling from video 3D object recognition localization and tracking medical image analysis and so on Computational learning theory involves different kinds of learning like incremental online reinforcement manifold multitask semi supervised etc Further it covers the real time challenges involved while processing big data analytics and stream processing with the integration of smart data computing services and interconnectivity Additionally it covers the recent developments to network intelligence for analyzing the network information and thereby adapting the algorithms dynamically to improve the efficiency In the last it includes the progress in signal processing to process the normal and abnormal categories of real world signals for instance signals generated from IoT devices smart systems speech videos etc and involves biomedical signal processing electrocardiogram ECG electroencephalogram EEG magnetoencephalography MEG and electromyogram EMG

   Proceedings of the 2nd International Conference on Intelligent User Interfaces Johanna Moore,Ernest Edmonds,Angel Puerta,1997   *Proceedings, Sixth International Conference on Intelligent Systems for Molecular Biology* Janice Glasgow,1998   *Cyber Crime and Forensic Computing* Gulshan Shrivastava,Deepak Gupta,Kavita Sharma,2021-09-07 This book presents a comprehensive study of different tools and techniques available to perform network forensics Also various aspects of network forensics are reviewed as well as related technologies and their limitations This helps security practitioners and researchers in better understanding of the problem current solution space and future research scope to detect and investigate various network intrusions against such attacks efficiently Forensic computing is rapidly gaining importance since the amount of crime involving digital systems is steadily increasing Furthermore the area is still underdeveloped and poses many technical and legal challenges The rapid development of the Internet over the past decade appeared to have facilitated an increase in the incidents of online attacks There are many reasons which are motivating the attackers to be fearless in carrying out the attacks For example the speed with which an attack can be carried out the anonymity provided by the medium nature of medium where digital information is stolen without actually removing it increased availability of potential victims and the global impact of the attacks are some of the aspects Forensic analysis is

performed at two different levels Computer Forensics and Network Forensics Computer forensics deals with the collection and analysis of data from computer systems networks communication streams and storage media in a manner admissible in a court of law Network forensics deals with the capture recording or analysis of network events in order to discover evidential information about the source of security attacks in a court of law Network forensics is not another term for network security It is an extended phase of network security as the data for forensic analysis are collected from security products like firewalls and intrusion detection systems The results of this data analysis are utilized for investigating the attacks Network forensics generally refers to the collection and analysis of network data such as network traffic firewall logs IDS logs etc Technically it is a member of the already existing and expanding the field of digital forensics Analogously network forensics is defined as The use of scientifically proved techniques to collect fuses identifies examine correlate analyze and document digital evidence from multiple actively processing and transmitting digital sources for the purpose of uncovering facts related to the planned intent or measured success of unauthorized activities meant to disrupt corrupt and or compromise system components as well as providing information to assist in response to or recovery from these activities Network forensics plays a significant role in the security of today s organizations On the one hand it helps to learn the details of external attacks ensuring similar future attacks are thwarted Additionally network forensics is essential for investigating insiders abuses that constitute the second costliest type of attack within organizations Finally law enforcement requires network forensics for crimes in which a computer or digital system is either being the target of a crime or being used as a tool in carrying a crime Network security protects the system against attack while network forensics focuses on recording evidence of the attack Network security products are generalized and look for possible harmful behaviors This monitoring is a continuous process and is performed all through the day However network forensics involves post mortem investigation of the attack and is initiated after crime notification There are many tools which assist in capturing data transferred over the networks so that an attack or the malicious intent of the intrusions may be investigated Similarly various network forensic frameworks are proposed in the literature   Emerging Trends and Future Directions in Artificial Intelligence, Machine Learning, and Internet of Things Innovations Khumukcham Robindro Singh,Nazrul Hoque,Arnab Kumar Maji,Sabyasachi Mondal,Jyoti Sekhar Banerjee,Siddhartha Bhattacharyya,Panagiotis Sarigiannidis,2025-09-29 The North East India AI Summit Unravelling Trends NEIAIS 2025 served as a vibrant platform for the exchange of cutting edge ideas and research in the field of Artificial Intelligence with a strong emphasis on both foundational theo ries and real world applications The summit brought together experts researchers and enthusiasts to explore critical areas including Machine Learning Deep Learning Computer Vision Natural Language Processing Smart Systems IoT Security Network Technology and Artificial Intelligence in Healthcare and Biomedical Applications Discussions also delved into emerging trends and computational techniques highlighting the transformative potential of AI in addressing complex real world challenges The conference received an overwhelming

response attracting more than 120 research paper submissions from various regions of India and abroad After a rigorous review process 55 high quality papers were accepted out of which over 44 papers were registered for presentation at the summit By fostering interdisciplinary col laboration and showcasing impactful innovations NEIAIS 2025 aims to inspire sustained research technological growth and broader societal benefits   2000 IEEE Intelligent Transportation Systems Conference Proceedings IEEE Electron Devices Society,2000 This text on intelligent transportation systems covers topics such as sensors communications simulation man machine interfaces control decision systems information systems computers reliability and quality assurance and navigation and guidance systems   Artificial intelligence-based medical image automatic diagnosis and prognosis prediction Junchi Yan,Yukun Lai,Yi Xu,Yinqiang Zheng,Zhibin Niu,Tao Tan,2023-06-27
