Psychology and Music W. Jay Dowling, Thomas J. Tighe, 2014-02-24 This book deals with the complex cognitive processes involved in understanding two horizontal aspects of music perception melody and rhythm

both separately and together Focusing on the tonal framework for pitch material in melodies the first section provides evidence that mere exposure to music organized in a particular way is sufficient to induce the auditory system to prepare itself to receive further input conforming to the patterns already experienced Its chapters also offer evidence concerning elaborations of those basic schemes that come about through specialized training in music Continuing themes from the first section such as the hypothesis that melodies must be treated as integral wholes and not mere collections of elements the second section discusses the integration of melody and rhythm In these chapters there is an underlying concern for clarifying the relation central to aesthetic questions between physical patterns of sound energy in the world and our psychological experience of them The chapters in the third section provide excellent examples of the new scientific literature that attempts to objectively study early musical abilities Their data establish that infants and young children are far more perceptive and skilled appreciators of music than was thought a decade ago

Huron,2008-01-25 The psychological theory of expectation that David Huron proposes in Sweet Anticipation grew out of the author's experimental efforts to understand how music evokes emotions These efforts evolved into a general theory of expectation that will prove informative to readers interested in cognitive science and evolutionary psychology as well as those interested in music The book describes a set of psychological mechanisms and illustrates how these mechanisms work in the case of music All examples of notated music can be heard on the Web Huron proposes that emotions evoked by expectation involve five functionally distinct response systems reaction responses which engage defensive reflexes tension responses where uncertainty leads to stress prediction responses which reward accurate prediction imagination responses which facilitate deferred gratification and appraisal responses which occur after conscious thought is engaged For real world events these five response systems typically produce a complex mixture of feelings The book identifies some of the aesthetic possibilities afforded by expectation and shows how common musical devices such as syncopation cadence meter tonality and climax exploit the psychological opportunities The theory also provides new insights into the physiological psychology of awe laughter and spine tingling chills Huron traces the psychology of expectations from the patterns of the physical cultural world through imperfectly learned heuristics used to predict that world to the phenomenal qualia we experienced as we apprehend the world
