Fish Locomotion Paolo Domenici, B. G. Kapoor, 2019-12 Fish accomplish most of their basic behaviors by swimming Swimming is fundamental in a vast majority of fish species for avoiding predation feeding finding food mating migrating and finding optimal physical environments Fish exhibit a wide variety of swimming patterns and behaviors This treatise looks at fish swimming from the behavioral and ecological perspectives rather than from the more traditional biomechanics ecomorphology and physiological perspectives used in studies of fish swimming The book is therefore largely integrative by its own nature and it includes considerations related to fisheries conservation and evolution It is aimed at students and researchers interested in fish swimming from any organismal background be it biomechanics ecomorphology physiology behavior or ecology

Encyclopedia of Fish Physiology, 2011-06-01 Fish form an extremely diverse group of vertebrates At a conservative estimate at least 40% of the world's vertebrates are fish On the one hand they are united by their adaptations to an aquatic environment and on the other they show a variety of adaptations to differing environmental conditions often to extremes of temperature salinity oxygen level and water chemistry They exhibit an array of behavioural and reproductive systems Interesting in their own right this suite of adaptive physiologies provides many model systems for both comparative vertebrate and human physiologists This four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for students and summary overviews for researchers alike Broadly organised into four themes articles cover Functional Thematic and Phylogenetic Physiology and Fish Genomics Functional articles address the traditional aspects of fish physiology that are common to all areas of vertebrate physiology including Reproduction Respiration Neural Sensory Central Effector Endocrinology Renal Cardiovascular Acid base Balance Osmoregulation Ionoregulation Digestion Metabolism Locomotion and so on Thematic Physiology articles are carefully selected and fewer in number They provide a level of integration that goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology Air breathing Migrations Temperature Endothermy etc Phylogenetic Physiology articles bring together information that bridges the physiology of certain groupings of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient Fishes Tunas Sharks etc Genomics articles describe the underlying genetic component of fish physiology and highlight their suitability and use as model organisms for the study of disease stress and physiological adaptations and reactions to external conditions Winner of a 2011 PROSE Award Honorable Mention for Multivolume Science Reference from the Association of American Publishers The definitive encyclopedia for the field of fish physiology Three volumes which comprehensively cover the entire field in over 300 entries written by experts

Detailed coverage of basic functional physiology of fishes physiological themes in fish biology and comparative physiology amongst taxonomic Groups Describes the genomic bases of fish physiology and biology and the use of fish as model organisms in human physiological research Includes a glossary of terms **Ecohydraulics** Ian Maddock, Atle Harby, Paul Kemp, Paul J. Wood, 2013-07-01 Ecohydraulics An Integrated Approach provides a research level text which highlights recent developments of this emerging and expanding field With a focus on interdisciplinary research the text examines the evolution and scope of ecohydraulics interactions between hydraulics hydrology fluvial geomorphology and aquatic ecology the application of habitat modelling in ecohydraulic studies state of the art methodological developments and approaches detailed case studies including fish passage design and the management of environmental flow regimes research needs and the future of ecohydraulics research The contributions offer broad geographic coverage to encapsulate the wide range of approaches case studies and methods used to conduct ecohydraulics research The book considers a range of spatial and temporal scales of relevance and aquatic organisms ranging from algae and macrophytes to macroinvertebrates and fish River management and restoration are also considered in detail making this volume of direct relevance to those concerned with cutting edge research and its application for water resource management Aimed at academics and postgraduate researchers in departments of physical geography earth sciences environmental science environmental management civil engineering biology zoology botany and ecology Ecohydraulics An Integrated Approach will be of direct relevance to academics researchers and professionals working in environmental research organisations national agencies and consultancies Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth Laith A. Jawad, 2021-09-12 The system of the Tigris Euphrates Rivers is one of the great river systems of southwestern Asia It comprises the Tigris and Euphrates Rivers which follow roughly parallel courses through the heart of the Middle East The lower portion of the region that they run through is known as Mesopotamia was one of the cradles of civilisation There are several environmental factors that govern the nature of the two rivers and shape the landscape the two rivers running through Geological events create rivers climate monitor the water supply the surrounding land influences the vegetation and the physical and chemical features of water The Tigris Euphrates system runs through the territory of four countries Iraq Iran Turkey and Syria Therefore any scientific approach to the environment of these two rivers should include the natural history events in these countries The book Tigris and Euphrates Rivers Their Environment from Headwaters to Mouth will be divided into nine parts These parts deal with the issues of the environment the status of the flora and fauna the abiotic aspects ecology hydrological regime of the two rivers the biotic aspects Water resources stress of the environment conservation issues Since the book of Julian Rzoska Euphrates and Tigris Mesopotamian Ecology and Destiny in 1980 no book or major reference has been published that includes between its cover the facts and information that the present book will present Therefore the importance of the present book falls in stating the present status of the environment of the two rivers and the comparison of

their environment between now and that of 37 years ago as given by J Rzoska 1980 The recent studies showed that there are a large number of natural and political events that happened within the last three decades in the area of the Tigris Euphrates river system that for sure have done a great change to the environment of the two rivers and consequently changing the biological and non biological resources of the two rivers This book will be a reference book to both Academic and students across the Middle East in different disciplines of knowledge to use in their researches on Tigris Euphrates river system The scholars interested in this area will use this book as a guide to compare this freshwater system with other areas in Asia and the world

Integrating Ecohydraulics in River Restoration José Maria Santos, Isabel Boavida, 2020-03-16 Rivers have been intensively degraded due to increasing anthropogenic impacts from a growing population in a continuously developing world Accordingly most rivers suffer from pressures as a result of increasing dam and weir construction habitat degradation flow regulation water pollution abstraction and the spread of invasive species Science based knowledge regarding solutions to counteract the effects of river degradation and melding principles of aquatic ecology and engineering hydraulics is thus urgently needed to guide present and future river restoration actions This Special Issue gathers a coherent set of studies from different geographic contexts on fundamental and applied research regarding the integration of ecohydraulics in river restoration ranging from field studies to laboratory experiments that can be applied to real world challenges It contains 13 original papers covering ecohydraulic issues such as river restoration technologies sustainable hydropower fish passage designs and operational criteria and habitat modeling All papers were reviewed by international experts in ecology hydraulics aquatic biology engineering geomorphology and hydrology The papers herein well represent the wide applicability of ecohydraulics in river restoration and serve as a basis to improve current knowledge and management and to reduce arguments between different interests and opinions

Robot Fish Ruxu Du, Zheng Li, Kamal Youcef-Toumi, Pablo Valdivia y Alvarado, 2015-05-06 This book provides a comprehensive coverage on robot fish including design modeling and optimization control autonomous control and applications It gathers contributions by the leading researchers in the area Readers will find the book very useful for designing and building robot fish not only in theory but also in practice Moreover the book discusses various important issues for future research and development including design methodology control methodology and autonomous control strategy This book is intended for researchers and graduate students in the fields of robotics ocean engineering and related areas

Migration Ecology of Marine Fishes David Hallock

Secor,2015-06-15 A revelatory look at the secrets of marine fish migration Not since F R Harden Jones published his masterwork on fish migration in 1968 has a book so thoroughly demystified the subject With stunning clarity David Hallock Secor s *Migration Ecology of Fishes* finally penetrates the clandestine nature of marine fish migration Secor explains how the four decades of research since Jones s classic have employed digital age technologies including electronic miniaturization computing microchemistry ocean observing systems and telecommunications that render overt the previously hidden migration behaviors of fish Emerging from the millions of observed telemetered simulated and chemically traced movement paths is an appreciation of the individual fish Members of the same populations may stay put explore delay accelerate evacuate and change course as they conditionally respond to their marine existence But rather than a morass of individual behaviors Secor shows us that populations are collectively organized through partial migration which causes groups of individuals to embark on very different migration pathways despite being members of the same population Case studies throughout the book emphasize how migration ecology confounds current fisheries management Yet as Secor explains conservation frameworks that explicitly consider the influence of migration on yield stability and resilience outcomes have the potential to transform fisheries management A synthetic treatment of all marine fish taxa teleosts and elasmobranchs this book employs explanatory frameworks from avian and systems ecology while arguing that migrations are emergent phenomena structured through schooling phenotypic plasticity and other collective agencies The book provides overviews of the following concepts The comparative movement ecology of fishes and birds The alignment of mating systems with larval dispersal Schooling and migration as adaptations to marine food webs Natal homing Connectivity in populations and metapopulations The contribution of migration ecology to population resilience

Diversity and Adaptation in Fish Behaviour Miles H.A. Keenleyside,2012-12-06 Fish are extremely successful vertebrates Because of a long and divergent history they are now found in almost every conceivable aquatic habitat This radiation has been accompanied by great diversity in structure physiology and behaviour Despite this variability fish must solve a number of basic problems that are common to all animals The most important of these are 1 to find and ingest appropriate food 2 to avoid predation and 3 to reproduce The main purpose of this book is to describe the variety of behavioural strategies that fish use in coping with these problems My approach has been to draw together material from both field and laboratory work that is widely scattered in the literature The major emphasis is on field studies since my main concern is with adaptive solutions to problems and I believe these are most likely to be correctly perceived by workers who are familiar with the natural ecological setting of their animals Of course many details of behaviour cannot be seen and quantified adequately in the field and therefore I have not ignored laboratory studies However even here I have concentrated on work that illustrates the variety of solutions that fish

use to solve the three basic problems Much important work for instance on causation development and learning is not included
