an equivalent S N curve system to calculate a damage index at a monitoring location The A 7D tracking method utilizes regression analysis to calculate equivalent baseline hours expended at a monitoring location Both methods then relate damage at the monitoring location to damage at other critical structural locations

**Secure Ground-Based Remote Recording and Archiving of Aircraft Black Box Data** Paul R. Schoberg, 2003-09 Aircraft accident investigation centers upon the analysis at all available information about the accident flight in the period leading up to the final catastrophe Key among the sources at information is data captured and recorded in the flight data recorder and cockpit voice recorder which are often referred to as the aircraft black boxes Par some accidents this flight data may he lest entirely or partially damaged and largely unusable The aircraft flight data recorders are the only place where flight data is recorded This single recording paint is a vulnerability to the availability at flight data that can be addressed by creating another place where the data is stored This thesis examines the feasibility at and discusses the technical framework necessary tar a system that transmits flight data tram an aircraft to a ground recording station The focus will be upon the requirements tar security and assurance at the information flow so that the confidentiality integrity availability and authenticity at the data are ensured

*Evaluation of a Damage Accumulation Monitoring System as an Individual Aircraft Tracking Concept* C. L. Guadagnino, 1982 The objective of this program was to study and evaluate the concept of using a damage accumulation monitoring system based on microprocessor technology for individual aircraft tracking IAT needed to satisfy the Force Management requirements of MIL STD 1503A The two major components of this study were 1 the evaluation of selected output and input IAT parameters required to monitor the potential crack growth of each of two major classes of aircraft Bomber Transport and Fighter Attack Trainer aircraft and 2 the definition of the microprocessor based IAT system in terms of capabilities and requirements A number of existing and planned IAT programs which were considered as typical for the two major classes of aircraft were studied to determine problem areas to evolve advanced concepts and to evaluate the output input parametric requirements and the functional characteristics needed to satisfy IAT system goals Several conceptual microprocessor based IAT systems and one existing microprocessor based IAT system capable of satisfying the requisite functional requirements were developed studied and described In addition the study was extended to

examine the capability of microprocessor based IAT systems to satisfy in part or wholly the load and environment spectra survey L ESS functions Several system concepts were developed and described      **Aircraft Tracking Optimization of Parameters Selection** R.
