

Evidence for Evolution

How are DNA and comparative anatomy used to show relatedness?

Why?

“You look just like your mother!” “He has his father’s eyes.” These comments that refer to the similarities between parents and their children are heard often in conversation. These similar traits are due to the genetic material that children inherit from their parents. As humans we are sometimes fortunate enough to have three or four generations sitting in a room at one time, and we can see the similarities from generation to generation. But how much do you look like your ancestors from 100 generations ago, 1000 generations ago or more? How much of your DNA did you inherit from those ancestors? What traits do you share with them?

Model 1 – Family Characteristics

1. Model 1 is a family tree. Circle the original parents of the family.
2. How would you describe the organisms in the second row of Model 1 that are connected to the parents by a line?
3. Identify the three members of the family that “married in” by placing a star next to their figures in Model 1.
4. How are the organisms in the third line related to the organisms in the first line?

Faculty Development on a Shoestring Diane D. Chapman, Michelle E. Bartlett, 2024-03-01 Faculty development is essential for promoting excellence in teaching and research supporting institutional goals and creating a culture of continuous learning that benefits both faculty members and students However educational institutions do not always allocate adequate resources towards supporting their faculty s professional development especially from the institutional level Underfunding this support can lead to the inability to attend conferences to keep up with the latest

research and pedagogical practices in their fields the inability to conduct meaningful research and lack of access to modern technologies This in turn can limit faculty growth and harm student learning outcomes Ultimately faculty who do not feel supported by their institutions can become disengaged or leave This book attempts to address the needs of faculty from institutions where there may not be adequate resources to support robust faculty development activities The chapters are written by faculty development experts in the US and Europe who understand the disparities between institutions and want to share programs that can be implemented for little or no cost Each chapter provides objective content implementation and evaluation details that can be used to replicate the program at other institutions The hope is to begin to level the playing field in faculty development through sharing successful low resource programs with proven outcomes *Flipped Learning* Robert Talbert, 2023-07-03 Flipped learning is an approach to the design and instruction of classes through which with appropriate guidance students gain their first exposure to new concepts and material prior to class thus freeing up time during class for the activities where students typically need the most help such as applications of the basic material and engaging in deeper discussions and creative work with it While flipped learning has generated a great deal of excitement given the evidence demonstrating its potential to transform students learning engagement and metacognitive skills there has up to now been no comprehensive guide to using this teaching approach in higher education Robert Talbert who has close to a decade s experience using flipped learning for majors in his discipline in general education courses in large and small sections as well as online courses and is a frequent workshop presenter and speaker on the topic offers faculty a practical step by step how to to this powerful teaching method He addresses readers who want to explore this approach to teaching those who have recently embarked on it as well as experienced practitioners balancing an account of research on flipped learning and its theoretical bases with course design concepts to guide them set up courses to use flipped learning effectively tips and case studies of actual classes across various disciplines and practical considerations such as obtaining buy in from students and getting students to do the pre class activities This book is for anyone seeking ways to get students to better learn the content of their course take more responsibility for their work become more self regulated as learners work harder and smarter during class time and engage positively with course material As a teaching method flipped learning becomes demonstrably more powerful when adopted across departments It is an idea that offers the promise of transforming teaching in higher education **Teaching About Evolution and the Nature of Science** National Academy of Sciences, Division of Behavioral and Social Sciences and Education, Board on Science Education, Working Group on Teaching Evolution, 1998-05-06 Today many school students are shielded from one of the most important concepts in modern science evolution In engaging and conversational style *Teaching About Evolution and the Nature of Science* provides a well structured framework for understanding and teaching evolution Written for teachers parents and community officials as well as scientists and educators this book describes how evolution reveals both the great diversity and similarity among the Earth s organisms it

explores how scientists approach the question of evolution and it illustrates the nature of science as a way of knowing about the natural world In addition the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution The book includes sample activities for teaching about evolution and the nature of science For example the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution Background information materials and step by step presentations are provided for each activity In addition this volume Presents the evidence for evolution including how evolution can be observed today Explains the nature of science through a variety of examples Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction Answers frequently asked questions about evolution Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council and offers detailed guidance on how to evaluate and choose instructional materials that support the standards Comprehensive and practical this book brings one of today s educational challenges into focus in a balanced and reasoned discussion It will be of special interest to teachers of science school administrators and interested members of the community **EVO Teachers Guide** Rodger W. Bybee,John Feldman,2012 In this film you ll learn among other things that evolution and religion are indeed compatible ways of looking at the world that Darwin was a creationist before he was an evolutionist and that cooperation is just as important as competition in the struggle for existence From Hummingbird Films website Evolution in Perspective Rodger W. Bybee,2004 This collection comes from and is developed for educators who deal with the controversy over evolution every day From a practical standpoint the book can help address the subject in the classroom and from a substantive standpoint it provides a remarkable overview of the state of teaching evolution in America Life Through Time Susan E.
