Evolutionary Dynamics of Complex Communications Networks Vasileios Karyotis, Eleni Stai, Symeon Papavassiliou, 2013-10-14 Until recently most network design techniques employed a bottom up approach with lower protocol layer mechanisms affecting the development of higher ones This approach however has not yielded fascinating results in the case of wireless distributed networks Addressing the emerging aspects of modern network analysis and design Evolutionary Dynamics of Complex Communications Networks introduces and develops a top bottom approach where elements of the higher layer can be exploited in modifying the lowest physical topology closing the network design loop in an evolutionary fashion similar to that observed in natural processes This book provides a complete overview of contemporary design approaches from the viewpoint of network science and complex social network analysis A significant part of the text focuses on the classification and analysis of various network modification mechanisms for wireless decentralized networks that exploit social features from relevant online social networks Each chapter begins with learning objectives and introductory material and slowly builds to more detailed analysis and advanced concepts Each chapter also identifies open issues while by the end of the book potential research directions are summarized for the more interested researcher or graduate student The approach outlined in the book will help network designers and administrators increase the value of their infrastructure without requiring any significant additional investment Topics covered include basic network graph models and properties cognitive methods and evolutionary computing complex and social network analysis metrics and features and analysis and development of the distinctive structure and features of complex networks Considering all aspects of modern network analysis and design the text covers the necessary material and background to make it a suitable source of reference for graduate students postdoctoral researchers and scientists

Evolutionary Dynamics in Complex Networks of Adaptive and Competing Agents Baosheng Yuan,2007 We use minority game model to investigate evolutionary dynamics in complex networks of adaptive agents competing for limited resources We show that the dynamics and the associated phase structures critically depend on the underlying network organizations and evolution is a key mechanism for the emergence of high order coordination among the networked agents A non growing random directed network admits a clear phase transition from a stable or "critical" state to a "chaotic" state In contrast no such phase transition has been detected in a growing directed network Instead it permits stable or "critical" dynamics for all the connectivity The dynamics of a scale free directed network is found sensitive to its connectivity if a small fraction of link reversal is allowed in the network The evolutionary dynamics exhibits a gradual phase transition from the stable or "critical" state to the "chaotic" regime with increase of the connectivity number K this suggests that the scale free directed network is vulnerable to a small fraction of "errors" in its network organization The underlying sources for the emergence of these dynamics are the organizations of the networks and can be understood with a descendant clusters theory Evolution dramatically enhances the performance of a system in a stable or "critical" regime but has no effect on a system in "chaotic" state such attribute can be empowered to typify the dynamics of a complex network The impact of evolution on system efficiency lies in its ability in reducing "crowdedness" of agents strategies and can be explained by a crowd anticrowd theory **In the Light of Evolution**

National Academy of Sciences,2007 The Arthur M Sackler Colloquia of the National Academy of Sciences address scientific topics of broad and current interest cutting across the boundaries of traditional disciplines Each year four or five such colloquia are scheduled typically two days in length and international in scope Colloquia are organized by a member of the Academy often with the assistance of an organizing committee and feature presentations by leading scientists in the field and discussions with a hundred or more researchers with an interest in the topic Colloquia presentations are recorded and posted on the National Academy of Sciences Sackler colloquia website and published on CD ROM These Colloquia are made possible by a generous gift from Mrs Jill Sackler in memory of her husband Arthur M Sackler **Artificial Life** ,2003 Consists of the proceedings of 1987 Interdisciplinary Workshop on the Synthesis and Simulation of Living Systems 1990 1992 Artificial Life
