Evolvable Hardware Martin A. Trefzer, Andy M. Tyrrell, 2015-09-14 This book covers the basic theory practical details and advanced research of the implementation of evolutionary methods on physical substrates Most of the examples are from electronic engineering applications including transistor level design and system level implementation The authors present an overview of the successes achieved and the book will act as a point of reference for both academic and industrial researchers

Inspired by Nature Susan Stepney, Andrew Adamatzky, 2017-10-25 This book is a tribute to Julian Francis Miller's ideas and achievements in computer science evolutionary algorithms and genetic programming electronics unconventional computing artificial chemistry and theoretical biology Leading international experts in computing inspired by nature offer their insights into the principles of information processing and optimisation in simulated and experimental living physical and chemical substrates Miller invented Cartesian Genetic Programming CGP in 1999 from a representation of electronic circuits he devised with Thomson a few years earlier The book presents a number of CGP's wide applications including multi step ahead forecasting solving artificial neural networks dogma approximate computing medical informatics control engineering evolvable hardware and multi objective evolutionary optimisations The book addresses in depth the technique of Evolution in Materio a term coined by Miller and Downing using a range of examples of experimental prototypes of computing in disordered ensembles of graphene nanotubes slime mould plants and reaction diffusion chemical systems Advances in sub symbolic artificial chemistries artificial bio inspired development code evolution with genetic programming and using Reed Muller expansions in the synthesis of Boolean quantum circuits add a unique flavour to the content The book is a pleasure to explore for readers from all walks of life from undergraduate students to university professors from mathematicians computer scientists and engineers to chemists and biologists

Post-apocalyptic Computing Andrew Adamatzky, 2025-03-11 An apocalyptic event reverses civilisation's control over nature Instead civilisation is placed under the control of nature The domains of science and engineering that will adapt to a post apocalyptic world are those whose status was marginal in the former civilisation In this edited volume we have invited specialists from various fields computer scientists chemists mathematicians engineers biologists physicists and philosophers to share their insights on how information acquisition information processing decision making and reasoning might evolve after apocalyptic events with the aim of shaping the design of the next von Neumann generation of computers The book explores diverse topics such as the theory of computation eternity of civilisations computable knowledge analog computation bio inspired fault tolerance reversible cellular automata catastrophe theory and the collapse of complex systems bio inspired soft robots computing with exotic substrates like clocks stones and sticks fluids slime moulds minimal resources decomposition of meanings collective computing biological computing neo sentience parallel algorithms and the metaphysics of the apocalypse
