Evolving Rule Based Models A Tool For:

Evolving Rule-Based Models Plamen P. Angelov, 2013-03-20 The idea about this book has evolved during the process of its preparation as some of the results have been achieved in parallel with its writing One reason for this is that in this area of research results are very quickly updated Another is possibly that a strong unchallenged theoretical basis in this field still does not fully exist From other hand the rate of innovation competition and demand from different branches of industry from biotech industry to civil and building engineering from market forecasting to civil aviation from robotics to emerging e commerce is increasingly pressing for more customised solutions based on learning consumers behaviour A highly interdisciplinary and rapidly innovating field is forming which focus is the design of intelligent self adapting systems and machines It is on the crossroads of control theory artificial and computational intelligence different engineering disciplines borrowing heavily from the biology and life sciences It is often called intelligent control soft computing or intelligent technology Some other branches have appeared recently like intelligent agents which migrated from robotics to different engineering fields data fusion knowledge extraction etc which are inherently related to this field The core is the attempts to enhance the abilities of the classical control theory in order to have more adequate flexible and adaptive models and control algorithms

Handbook On Computational Intelligence (In 2 Volumes) Plamen Parvanov Angelov, 2016-03-18 With the Internet the proliferation of Big Data and autonomous systems mankind has entered into an era of digital obesity In this century computational intelligence such as thinking machines have been brought forth to process complex human problems in a wide scope of areas from social sciences economics and biology medicine and social networks to cyber security The Handbook of Computational Intelligence in two volumes prompts readers to look at these problems from a non traditional angle It takes a step by step approach supported by case studies to explore the issues that have arisen in the process The Handbook covers many classic paradigms as well as recent achievements and future promising developments to solve some of these very complex problems Volume one explores the subjects of fuzzy logic and systems artificial neural networks and learning systems Volume two delves into evolutionary computation hybrid systems as well as the applications of computational intelligence in decision making the process industry robotics and autonomous systems This work is a one stop shop for beginners as well as an inspirational source for more advanced researchers It is a useful resource for lecturers and learners alike

Empirical Approach to Machine Learning Plamen P. Angelov, Xiaowei Gu, 2018-10-17 This book provides a one stop source for all readers who are interested in a new empirical approach to machine learning that unlike traditional methods successfully addresses the demands of today s data driven world After an introduction to the fundamentals the book discusses in depth anomaly detection data partitioning and clustering as well as classification and predictors It describes classifiers of zero and first order and the new highly efficient and transparent deep rule based classifiers particularly highlighting their applications to image processing Local optimality and stability conditions for the methods presented are

formally derived and stated while the software is also provided as supplemental open source material The book will greatly benefit postgraduate students researchers and practitioners dealing with advanced data processing applied mathematicians software developers of agent oriented systems and developers of embedded and real time systems It can also be used as a textbook for postgraduate coursework for this purpose a standalone set of lecture notes and corresponding lab session notes are available on the same website as the code Dimitar Filev Henry Ford Technical Fellow Ford Motor Company USA and Member of the National Academy of Engineering USA The book Empirical Approach to Machine Learning opens new horizons to automated and efficient data processing Paul J Werbos Inventor of the back propagation method USA I owe great thanks to Professor Plamen Angelov for making this important material available to the community just as I see great practical needs for it in the new area of making real sense of high speed data from the brain Chin Teng Lin Distinguished Professor at University of Technology Sydney Australia This new book will set up a milestone for the modern intelligent systems Edward Tunstel President of IEEE Systems Man Cybernetics Society USA Empirical Approach to Machine Learning provides an insightful and visionary boost of progress in the evolution of computational learning capabilities yielding interpretable and transparent implementations

Applications and Science in Soft Computing Ahmad Lotfi, Jonathan M. Garibaldi, 2013-06-29 Soft computing techniques have reached a significant level of recognition and acceptance from both the academic and industrial communities The papers collected in this volume illustrate the depth of the current theoretical research trends and the breadth of the application areas in which soft computing methods are making contributions This volume consists of forty six selected papers presented at the Fourth International Conference on Recent Advances in Soft Computing which was held in Nottingham United Kingdom on 12 and 13 December 2002 at Nottingham Trent University This volume is organized in five parts The first four parts address mainly the fundamental and theoretical advances in soft computing namely Artificial Neural Networks Evolutionary Computing Fuzzy Systems and Hybrid Systems The fifth part of this volume presents papers that deal with practical issues and industrial applications of soft computing techniques We would like to express our sincere gratitude to all the authors who submitted contributions for inclusion We are also indebted to Janusz Kacprzyk for his vices related to this volume We hope you find the volume an interesting reflection of current theoretical and application based soft computing research

Computational Intelligence - Volume I Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has

a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Granular, Fuzzy, and Soft Computing Tsau-Young Lin, Churn-Jung Liao, Janusz Kacprzyk, 2023-03-29 The first edition of the Encyclopedia of Complexity and Systems Science ECSS 2009 presented a comprehensive overview of granular computing GrC broadly divided into several categories Granular computing from rough set theory Granular Computing in Database Theory Granular Computing in Social Networks Granular Computing and Fuzzy Set Theory Grid Cloud Computing as well as general issues in granular computing In 2011 the formal theory of GrC was established providing an adequate infrastructure to support revolutionary new approaches to computer data science including the challenges presented by so called big data For this volume of ECSS Second Edition many entries have been updated to capture these new developments together with new chapters on such topics as data clustering outliers in data mining qualitative fuzzy sets and information flow analysis for security applications Granulations can be seen as a natural and ancient methodology deeply rooted in the human mind Many daily things are routinely granulated into sub things The topography of earth is granulated into hills plateaus etc space and time are granulated into infinitesimal granules and a circle is granulated into polygons of infinitesimal sides Such granules led to the invention of calculus topology and non standard analysis Formalization of general granulation was difficult but as shown in this volume great progress has been made in combining discrete and continuous mathematics under one roof for a broad range of applications in data science

Autonomous Learning Systems Plamen Angelov, 2012-11-06 Autonomous Learning

Systems is the result of over a decade of focused research and studies in this emerging area which spans a number of well known and well established disciplines that include machine learning system identification data mining fuzzy logic neural networks neuro fuzzy systems control theory and pattern recognition The evolution of these systems has been both industry driven with an increasing demand from sectors such as defence and security aerospace and advanced process industries bio medicine and intelligent transportation as well as research driven there is a strong trend of innovation of all of the above well established research disciplines that is linked to their on line and real time application their adaptability and flexibility Providing an introduction to the key technologies detailed technical explanations of the methodology and an illustration of the practical relevance of the approach with a wide range of applications this book addresses the challenges of autonomous learning systems with a systematic approach that lays the foundations for a fast growing area of research that will underpin a range of technological applications vital to both industry and society Key features Presents the subject systematically from explaining the fundamentals to illustrating the proposed approach with numerous applications Covers a wide range of applications in fields including unmanned vehicles robotics oil refineries chemical industry evolving user behaviour and activity recognition Reviews traditional fields including clustering classification control fault detection and anomaly detection filtering and estimation through the prism of evolving and autonomously learning mechanisms Accompanied by a website hosting additional material including the software toolbox and lecture notes Autonomous Learning Systems provides a one stop shop on the subject for academics students researchers and practicing engineers It is also a valuable reference for Government agencies and software developers
