

Evidence Based Practice

Healthcare has changed. No longer do doctors provide care based on what they read in textbooks.

Modern healthcare should be based on relevant current research, the clinical experience of your healthcare provider, and your wishes and values.

This is called "evidence-based practice".

Chiropractic has a great scientific basis

"We know from the science that chiropractic care improves your brain's ability to see what is going on in and around your body." Many people say they experience improvements in the way they breathe," or their blood pressure," or even their digestion when they get adjusted". We also know from science that people who have spinal problems, such as back pain, neck pain, and headaches, improve well under chiropractic care."

Parkin-Smith,King's College London. School of Nursing and Midwifery,2010 Background Acute low back pain LBP is a major health problem that has a significant impact on healthcare resources Treatments for acute LBP have been tested in clinical trials and have been subject to systematic review Consequently clinical practice guidelines have been developed in which treatment recommendations are made However clinical guidelines are often not translated into practice and clinicians often do not adhere to them In addition treatment selection for acute LBP is influenced by practitioner or patient preference implying that not all treatment delivered is based on the best available scientific evidence Therefore there is a need to develop and test innovative approaches to the treatment of acute LBP in order to standardise and improve care alongside facilitating the translation of research into practice Aim This study set out to assess the short term effectiveness of a protocol of evidence based conservative care acceptable to practicing chiropractors and viable to use in chiropractic practice and compare it to usual chiropractic care for acute non specific LBP in chiropractic practice Methods Design Pragmatic pilot randomised controlled trial RCT set in three chiropractic practices in the United Kingdom One hundred and eighteen eligible patients with acute non specific LBP were randomly allocated to one of the two care groups Up to seven treatments were provided to each participant over a four week period The primary outcome measures were low back related pain and disability The secondary outcome was patient satisfaction with care Results The

Chiropractics Kevin Thorley, The evolution of chiropractic practices reflects a broader trend towards integrating alternative and complementary therapies into mainstream healthcare emphasizing a more holistic and patient centered approach Evidence based practice EBP in healthcare including chiropractic care involves integrating the best available research evidence with clinical expertise and patient preferences to make informed decisions about patient care This approach aims to ensure that treatments and interventions are effective safe and tailored to individual patient needs EBP relies on three main components the best available research evidence clinical expertise and patient preferences and values The best available research evidence refers to high quality peer reviewed studies and clinical trials that provide reliable data on the effectiveness and safety of various treatments and interventions Systematic reviews and meta analyses are particularly valuable as they synthesize findings from multiple studies offering a comprehensive overview of the evidence

Clinical expertise encompasses the knowledge and skills of healthcare professionals in interpreting research evidence and applying it to individual patient cases. It involves understanding the nuances of different conditions, recognizing which treatments are most appropriate, and adapting interventions based on patient responses.
