

Earth electrode is a metal plate or other conducting elements of electricity partially buried in the earth to constitute and provide a reliable conductive path for the fault current to the ground.

Ideal source includes an ideal voltage source and ideal current source. An ideal source is a theoretical concept of an electrical current or voltage supply (such as a battery) with no losses and a perfect voltage or current supply. Ideal sources are used for analytical purposes because they cannot occur in nature.

Cell is a device containing electrodes immersed in an electrolyte, used for generating current or for electrolysis.

Resistor is a device that has resistance to the passage of an electric current.

Battery is a container consisting of one or more cells, in which chemical energy is converted into electricity and used as a source of power.

Capacitor is a device used to store an electric charge, consisting of one or more pairs of conductors separated by an insulator.

Source is a part of a field-effect transistor from which carriers flow into the inter-electrode channel.

Antenna is an electrical device which converts electric power into radio waves and vice versa.
