Form-Oriented Analysis Dirk Draheim, Gerald Weber, 2005 Form based applications range from simple web shops to complex enterprise resource planning systems Draheim and Weber adapt well established basic modeling techniques in a novel way to achieve a modeling framework optimized for this broad application domain They introduce new modeling artifacts such as page diagrams and form storyboards and separate dialogue patterns to allow for reuse In their implementation they have developed new constructs such as typed server pages and tools for forward and reverse engineering of presentation layers The methodology is explained using an online bookshop as a running example in which the user can experience the modeling concepts in action The combination of theoretical achievements and hands on practical advice and tools makes this book a reference work for both researchers in the areas of software architectures and submit response style user interfaces and professionals designing and developing such applications More information and additional material is also available online

Hagenberg Business Process Modelling Method Felix Kossak, Christa Illibauer, Verena Geist, Christine Natschläger, Thomas Ziebermayr, Bernhard Freudenthaler, Theodorich Kopetzky, Klaus-Dieter Schewe, 2016-04-27 This book presents a proposal for designing business process management BPM systems that comprise much more than just process modelling Based on a purified Business Process Model and Notation BPMN variant the authors present proposals for several important issues in BPM that have not been adequately considered in the BPMN 2.0 standard It focusses on modality as well as actor and user interaction modelling and offers an enhanced communication concept In order to render models executable the semantics of the modelling language needs to be described rigorously enough to prevent deviating interpretations by different tools For this reason the semantics of the necessary concepts introduced in this book are defined using the Abstract State Machine ASM method Finally the authors show how the different parts of the model fit together using a simple example process and introduce the enhanced Process Platform eP2 architecture which binds all the different components together The resulting method is named Hagenberg Business Process Modelling H BPM after the

Austrian village where it was designed The motivation for the development of the H BPM method stems from several industrial projects in which business analysts and software developers struggled with redundancies and inconsistencies in system documentation due to missing integration The book is aimed at researchers in business process management and industry 4.0 as well as advanced professionals in these areas Advances in Conceptual Modeling - Theory and Practice John F.
