*The Real Cost of Cheap Food* Michael Carolan,2018-02-06 This thought provoking but accessible book critically examines the dominant food regime on its own terms by seriously asking whether we can afford cheap food and by exploring what exactly cheap food affords us Detailing the numerous ways that our understanding of food has narrowed such as its price per ounce combination

of nutrients yield per acre or calories the book argues for a more contextual view of food when debating its affordability The first edition published in 2011 was widely praised for its innovative approach and readability In this new edition the author brings all data and citations fully up to date Increased coverage is given to many topics including climate change aquaculture financialization BRICS countries food based social movements gender and ethnic issues critical public health and land succession There is also greater discussion about successful cases of social change throughout all chapters by including new text boxes that emphasize these more positive messages The author shows why today s global food system produces just the opposite of what it promises The food produced under this regime is in fact exceedingly expensive Many of these costs will be paid for in other ways or by future generations and cheap food today may mean expensive food tomorrow By systematically assessing these costs the book delves into issues related but not limited to international development national security healthcare industrial meat production organic farming corporate responsibility government subsidies food aid and global commodity markets It is shown that exploding the myth of cheap food requires we have at our disposal a host of practices and policies

**Paperbound Books in Print**, 1992      **Choice**, 2005      Human Evolution and Biocultural Diversity Jenna Olivia Parker Adams, 1999      **ON BIOCULTURAL DIVERSITY** MAFFI LUISA, 2001-04-17 Biodiversity loss is a well known phenomenon Over the next thirty years according to most projections 20 percent of the world s species may cease to exist

Less widely known though attracting increasing attention is the diversity loss that is affecting the world's languages and cultures. Up to 11 percent of an estimated 6 000 spoken languages in the world today are nearly extinct and as many as 90 percent of those languages may vanish during the course of this century. *On Biocultural Diversity* brings together an interdisciplinary group of scholars from the social and natural sciences as well as cultural advocates, human rights specialists and indigenous experts to discuss the ways in which the losses of biological, linguistic and cultural diversity are linked. Combining research with advocacy, this book outlines the threats to the world's diversity, explores the connections among its various forms and recommends measures to help preserve and perpetuate the variety of life on Earth. Presenting case studies from Africa, Asia, Oceania and the Americas, the contributors show how the loss of linguistic and cultural diversity often involving indigenous peoples' removal from their lands, suppression of their languages and the loss of traditional environmental knowledge based on subsistence practices can affect biodiversity. The final chapters suggest new directions for research, documentation, training and action in order to conserve biocultural diversity. This collection reveals a broad picture of why diversity matters. It offers a common foundation and practical avenues for preserving the wealth of biological life as well as the cultural riches represented by indigenous and minority languages and the knowledge they embody.

**Dynamics of Human Diversity** N. J. Enfield, 2011      *Biocultural Diversity in Europe* Mauro Agnoletti, Francesca Emanuelli, 2016-03-09

The book collects a selection of the papers presented at the meeting held in the context of the Joint Programme on the Links between Biological and Cultural Diversity JP BiCuD. Recognizing the inextricable link between biological and cultural diversity, the United Nations Educational Scientific and Cultural Organization (UNESCO) and the Secretariat of the Convention on Biological Diversity (CBD) joined forces and in 2010 launched the Joint Programme on the Links between Biological and Cultural Diversity JP BiCuD. The first meeting for the implementation of the JP BiCuD was held in Florence, Italy, in April 2014 and produced the UNESCO CBD Florence Declaration which highlights the concept of biocultural diversity. The European rural territory is predominantly a biocultural, multi-functional landscape providing a crucial and effective space for integration of biological and cultural diversity, suggesting the need to revise some of the current strategies for the assessment and management of biodiversity.
