Ferenc Mezei, Catherine Pappas, Thomas Gutberlet, 2002-12-19 Neutron spin echo NSE spectroscopy is the highest energy resolution neutron scattering technique available for examining a large area in time and space in condensed matter physics. This broad dynamic and spatial range is extensively exploited in the study of a wide range of scientific problems ranging from the dynamics of glasses, polymer melts, complex fluids, and microemulsions to the elementary excitations in superfluid  $^4\text{He}$  and to ferromagnets and spin glasses. This book reviews the current status and future prospects in NSE spectroscopy, describing the method, latest instrumentation, and also the use of NSE in fundamental hard and soft matter science. It provides first hand information for researchers working in the fields touched by NSE. In addition, young researchers, PhD students, and graduates interested in the method will obtain a comprehensive overview and guidelines to implementing the NSE technique.
