## Functions Of One Complex Variable Ii Graduate Texts In Mathematics Vol 159:

*Complex Analysis* Eberhard Freitag, Rolf Busam, 2006-01-17 All needed notions are developed within the book with the exception of fundamentals which are presented in introductory lectures no other knowledge is assumed Provides a more in depth introduction to the subject than other existing books in this area Over 400 exercises including hints for solutions are included

**Fourier Series, Fourier Transforms, and Function Spaces** Tim Hsu, 2023-12-07 Fourier Series Fourier Transforms and Function Spaces is designed as a textbook for a second course or capstone course in analysis for advanced undergraduate or beginning graduate students By assuming the existence and properties of the Lebesgue integral this book makes it possible for students who have previously taken only one course in real analysis to learn Fourier analysis in terms of Hilbert spaces allowing for both a deeper and more elegant approach This approach also allows junior and senior undergraduates to study topics like PDEs quantum mechanics and signal processing in a rigorous manner Students interested in statistics time series machine learning kernel methods mathematical physics quantum mechanics or electrical engineering signal processing will find this book useful With 400 problems many of which guide readers in developing key theoretical concepts themselves this text can also be adapted to self study or an inquiry based approach Finally of course this text can also serve as motivation and preparation for students going on to further study in analysis

Geometric Function Theory Tom Carroll, 2024-12-11 This textbook provides a second course in complex analysis with a focus on geometric aspects It covers topics such as the spherical geometry of the extended complex plane the hyperbolic geometry of the Poincaré disk conformal mappings the Riemann Mapping Theorem and uniformisation of planar domains characterisations of simply connected domains the convergence of Riemann maps in terms of Carathéodory convergence of the image domains normal families and Picard's theorems on value distribution as well as the fundamentals of univalent function theory Throughout the text the synergy between analysis and geometry is emphasised with proofs chosen for their directness The textbook is self contained requiring only a first undergraduate course in complex analysis The minimal topology needed is introduced as necessary While primarily aimed at upper level undergraduates the book also serves as a concise reference for graduates working in complex analysis

The Hardy Space of a Slit Domain Alexandru Aleman, Nathan S. Feldman, William T. Ross, 2010-01-08 If  $H$  is a Hilbert space and  $T \in \mathcal{L}(H)$  is a continuous linear operator a natural question to ask is What are the closed subspaces  $M$  of  $H$  for which  $T M \subset M$  Of course the famous invariant subspace problem asks whether or not  $T$  has any non trivial invariant subspaces This monograph is part of a long line of study of the invariant subspaces of the operator  $T_M$  multiplication by the independent variable  $z$  in  $H^2_f$  on a  $z \in \mathbb{D}$  Hilbert space of analytic functions on a bounded domain  $G$  in  $\mathbb{C}$  The characterization of these  $M$  invariant subspaces is particularly interesting since it entails both the properties  $z$  of the functions inside the domain  $G$  their zero sets for example as well as the behavior of the functions near the boundary of  $G$  The operator  $M$  is not only interesting in its own right but often serves as a model operator for certain classes of linear

operators By this we mean that given an operator  $T$  on  $H$  with certain properties certain subnormal operators or two isometric operators with the right spectral properties etc there is a Hilbert space of analytic functions on a domain  $G$  for which  $T$  is unitarity equivalent to  $M$

**Conformal Maps And Geometry** Dmitry Beliaev, 2019-11-19 I very much enjoyed reading this book Each chapter comes with well thought out exercises solutions to which are given at the end of the chapter Conformal Maps and Geometry presents key topics in geometric function theory and the theory of univalent functions and also prepares the reader to progress to study the SLE It succeeds admirably on both counts MathSciNet Geometric function theory is one of the most interesting parts of complex analysis an area that has become increasingly relevant as a key feature in the theory of Schramm Loewner evolution Though Riemann mapping theorem is frequently explored there are few texts that discuss general theory of univalent maps conformal invariants and Loewner evolution This textbook provides an accessible foundation of the theory of conformal maps and their connections with geometry It offers a unique view of the field as it is one of the first to discuss general theory of univalent maps at a graduate level while introducing more complex theories of conformal invariants and extremal lengths Conformal Maps and Geometry is an ideal resource for graduate courses in Complex Analysis or as an analytic prerequisite to study the theory of Schramm Loewner evolution

**Geodesics, Retracts, and the Norm-Preserving Extension Property in the Symmetrized Bidisc** Jim Agler, Zinaida Lykova, Nicholas Young, 2019-04-10 A set  $V$  in a domain  $U$  in  $\mathbb{C}^n$  has the norm preserving extension property if every bounded holomorphic function on  $V$  has a holomorphic extension to  $U$  with the same supremum norm We prove that an algebraic subset of the symmetrized bidisc

**Fixed Point of the Parabolic Renormalization Operator** Oscar E. Lanford III, Michael Yampolsky, 2014-11-01 This monograph grew out of the authors efforts to provide a natural geometric description for the class of maps invariant under parabolic renormalization and for the Inou Shishikura fixed point itself as well as to carry out a computer assisted study of the parabolic renormalization operator It introduces a renormalization invariant class of analytic maps with a maximal domain of analyticity and rigid covering properties and presents a numerical scheme for computing parabolic renormalization of a germ which is used to compute the Inou Shishikura renormalization fixed point Inside readers will find a detailed introduction into the theory of parabolic bifurcation Fatou coordinates calle Voronin conjugacy invariants of parabolic germs and the definition and basic properties of parabolic renormalization The systematic view of parabolic renormalization developed in the book and the numerical approach to its study will be interesting to both experts in the field as well as graduate students wishing to explore one of the frontiers of modern complex dynamics

**Acta Scientiarum Mathematicarum** József Attila Tudományegyetem, 1997

**The Bulletin of Mathematics Books**, 1992

*Functions of One Complex Variable II* John B. Conway, 1996-06-13 This book discusses a variety of problems which are usually treated in a second course on the theory of functions of one complex variable the level being gauged for graduate

students It treats several topics in geometric function theory as well as potential theory in the plane covering in particular conformal equivalence for simply connected regions conformal equivalence for finitely connected regions analytic covering maps de Branges proof of the Bieberbach conjecture harmonic functions Hardy spaces on the disk potential theory in the plane A knowledge of integration theory and functional analysis is assumed     **The British National Bibliography** Arthur James Wells,1996     **Subject Guide to Books in Print** ,1997     **American Book Publishing Record** ,1995     Books in Print Supplement ,1994     International mathematical news ,1996     **Directions** ,1979     *Books in Print* ,1994
